D 134 | Net value is not best ownership

PRIVATE FICTIONAL classroom valuation. Crore INR present values on one consistent horizon/risk basis, not annual profit. No actual offer, sale, acquisition, corporate disclosure, account change or spend.

Separate alternatives	Base 100 excludes all parenting and standalone enhancement. A gross 10-central 3-disruption 2=net 5, value 105. B 9-2-1=net 6, value 106. Standalone adds 4 net, value 104. These paths are mutually exclusive, not benefits to sum.
Counterfactual strength	A adds 5 versus bare base but only 1 versus feasible enhanced standalone 104; A trails B by 1. Positive A value added does not establish best-owner advantage. B is best only among specified modeled candidates, not every possible owner.
Sale is another decision	Optional gross offer 106-exit 2=104 versus A retention 105; retain by 1 in this limited financial toy. Buyer B modeled value 106 is not a binding offer, attainable sale price or approval. Equality is a tie, not strict preference.
Fees versus resources	Internal management fee 8 is deducted at unit and received by parent; consolidated residual is unchanged at 105. Count actual central resources 3 once, disruption 2 once. Ignore neither real external effects nor taxes simply because the invoice is internal.
Ownership versus contract	Separate synthetic contract: gross benefit 8, provider price 3 and implementation/coordination cost 1 gives net 4, value 104. A 105 beats this specified contract by 1, not every contract. Do not subtract the same central resource cost again.
Entry price and authority	Separate purchase toy: assumed intrinsic value 110, price 108 plus one-time execution 2 leaves 0 NPV headroom, not a positive return beyond the assumed valuation basis. Attractiveness, better-off mechanism and owner evidence remain qualitative/unknown. No real funding or execution follows.

Inputs | Keep all present values comparable

Yellow controls synthetic. Common valuation basis assumed, not independently validated. Costs nonnegative; net standalone enhancement may be negative. No quantities here are annual cash flows.

Unit base excluding all enhancements, crore PV	100.00
Parent A gross benefit, crore PV	10.00
Parent A actual central resource cost, crore PV	3.00
Parent A operating disruption, crore PV	2.00
Parent B gross benefit, crore PV	9.00
Parent B central resource cost, crore PV	2.00
Parent B operating disruption, crore PV	1.00
Standalone attainable net enhancement, crore PV	4.00

Optional gross sale offer, crore	106.00
External exit costs, crore	2.00

Internal management fee transfer, crore PV	8.00

Inputs | Keep all present values comparable

Yellow controls synthetic. Common valuation basis assumed, not independently validated. Costs nonnegative; net standalone enhancement may be negative. No quantities here are annual cash flows.

Contract gross benefit, crore PV	8.00
Outside provider price, crore PV	3.00
Additional implementation/coordination cost, crore PV	1.00

Separate target intrinsic value to acquirer, crore PV	110.00
Separate purchase price, crore	108.00
Additional entry/execution costs, crore PV	2.00

Owner inputs valid?	1.00
Sale inputs valid?	1.00
Internal fee inputs valid?	1.00
Contract inputs valid?	1.00
Entry-price inputs valid?	1.00

Input validity is not source accuracy, feasibility, a common discount-rate proof, pricing certainty, legal clearance or permission. Models isolate unrelated invalid inputs; comparisons require both relevant input families. Actual evidence remains blank.

Owners | Added value and rival-owner value

Crore PV. No mutual benefits are added together. The same bare base is used for all three alternatives; standalone enhancement is already net of its own costs.

A net parenting uplift	5.00
A retained value	105.00
B net parenting uplift	6.00
B modeled value	106.00
Enhanced standalone value	104.00

A minus enhanced standalone	1.00
A minus B	-1.00

Maximum of specified alternative values	106.00
A value minus specified maximum	-1.00
A positive net uplift? 1=yes,0=no	1.00

A 105 exceeds standalone 104 but trails B 106. Positive net value 5 and incremental 1 are different claims. A gap of 0 to maximum can include ties; it does not prove uniqueness. Unknown alternative owner, implementation and valuation basis require evidence, not forced best-owner labels.

Sale | Price received is not buyer value

Optional offer and costs assumed comparable with retention PV. No tax, timing, stranded overhead, debt/employee rights or other omitted cash effects quantified. No binding offer or real recommendation.

Net sale proceeds, crore	104.00
Retain A minus net sale, crore	1.00

Gross sale price for financial indifference	107.00
Buyer B value minus assumed gross price	0.00

Offer 106 less exit 2=104; retain 105 is ahead 1. Gross 107 gives equality at 105; above 107 favors sale within these assumptions only. Buyer modeled value 106 need not be paid. Entry fees, cash settlement, uncertainty and real rights remain separate; no sale authorized.

Fees | Eliminate the transfer, keep resource costs

A unit plus its parent are consolidated here. Internal fee is not an additional external resource cost. Same horizon/basis as owner values; a numeric transfer is not tax or accounting advice.

Unit value after internal fee, before parent resources	100.00
Parent fee less actual central resource cost	5.00
Consolidated unit+parent value	105.00
Consolidation residual versus A value	0.00

Baseline unit 100, parent 5, sum 105. Change fee 8 to 20: unit 88, parent 17, sum 105. Charging fee AND all underlying resources as independent group costs double counts. Actual outside tax/leakage, third-party costs, minority interests and incentive effects would need their own scoped model.

Contract | Similar mechanism need not need ownership

Separate synthetic accessible contract option. Provider price includes provider resources; additional coordination cost excludes that price. No legal enforceability, quality, bargaining power or access verified.

Contract net benefit, crore PV	4.00
Contract-enabled unit value	104.00
A retained minus contract value	1.00
Contract minus enhanced standalone	0.00
Maximum of listed own/standalone/contract values	106.00

Contract 8-3-1=4, value 104; A exceeds it 1. Contract gross 10 instead gives 106, matching B and beating A. Do not copy baseline ranking after edits or add standalone enhancement again. Ownership can change coordination, control and incentives; this small toy cannot prove those effects.

Entry | Attractiveness does not cure any price

Separate purchase toy in crore PV. Intrinsic value 110 already includes modeled future benefits on one risk-adjusted basis, excludes price and entry costs. Not an annual-profit multiple or a forecast of actual target value.

Total purchase and execution cost	110.00
NPV headroom beyond stated intrinsic basis	0.00
Maximum price at zero NPV headroom	108.00

110-(108+2)=0, so no positive NPV headroom at the assumed basis. Price 107 leaves 1; 109 gives-1. Zero is not strictly value-creating and does not prove affordability, structural attractiveness or a better-off mechanism. No guessed discount rate, industry pass/fail or investment authority.

Evidence | Different questions, different evidence

Written passages refreshed 13 November 2026. No current company facts, historical price premium treated as current, source video watched or independent comparative causal validation.

Owner comparison	https://hbr.org/1995/03/corporate-strategy-the-quest-for-parenting-advantage - March-April 1995 opening/landing only, not full article. https://cmr.berkeley.edu/1995/11/38-1-the-value-of-the-parent-company/ -1 Nov 1995 abstract only: value added versus rival parents. Same authors, not two independent empirical replications.
Diversification tests	https://www.blackwellpublishing.com/content/GrantContemporaryStrategyAnalysis/6th_Edition/CSAC15.pdf - selected three-tests/better-off text, not full chapter/figures. Attractiveness or capable of improvement; entry price must not absorb future profits; either linked unit or parent gains advantage. Historical 25-50% premium is not a current pricing fact.
Dated portfolio argument	https://management.web.uniroma1.it/sites/default/files/optional%20reading%201%20porter_0.pdf - selected opening/portfolio assumptions, not full article.1950-1986 US study and developed-market judgments are dated/context-bound. Capital alone or industry relatedness is not automatically parent advantage.
Implementation dissent	https://www.bcg.com/publications/2016/portfolio-strategy-capital-allocation-parenting-advantage - selected 2016 introduction and adding/subtracting-value discussion. Campbell 10%rule explicitly flexible; Krell challenges it with 2-5%. Not a universal threshold or causal proof from historical Bayer share price.
Ownership test	https://d30i16bbj53pdg.cloudfront.net/wp-content/uploads/2024/06/The-continuum-of-effective-corporate-strategy.pdf - selected opening corporate-advantage/better-off/ownership passages only, not full PDF. Contract alternatives and ongoing ownership costs matter. Historical Disney price/occupancy examples not independently checked or used as current facts.
Evidence and scope	Six URLs, academic framework/publisher abstract, textbook and edited practitioner panel; not six independent efficacy tests. Fee elimination is authored arithmetic, not sourced tax guidance. Actual legal entity/date/unit/capability/rival evidence remains required for Tata/Reliance/AdityaBirla/Campa. No forced company verdict/full AV/native parity/learner/account/legal/overall 10.

Actual work | Comparative evidence stays blank

Record only actual authorized work. No real financial records, company contacts, participant recruitment, budget or data upload required.

Date/version	Common PV basis	Owner comparison	Fee correction	Contract objection	Price sensitivity	Delayed transfer

Actual work remains blank. Record only what occurred: dates, reasoning, error/source/correction, strongest objection and a new delayed transfer. No invented learner results, sponsor acceptance, actual budget release or signed rights.

Failure log | Authored execution only

Observed native tests are added only after execution. Not actual learner mistakes, independent human audit, Excel/Sheets parity, real authority or overall 10/10.

Controlled test	Observed authored outcome
Independent baseline arithmetic	PASS:31 baseline formulas independently recomputed.
Changed owner/counterfactual values	PASS:10 owner and standalone changes.
Changed sale/fee/contract/entry	PASS:14 sale/fee/contract/entry changes.
Equality and ranking reversals	PASS:explicit equality and rank reversals tested.
Invalid control isolation	PASS:16 invalid controls,496 formula checks.
Broken reference holds	PASS:6 broken references,6 explicit error checks.
Restored clean saved caches	PASS:24 changed sets+restore;clean caches.
Actual/reviewer/transfer blank	PASS:actual/reviewer/transfer rows blank.

Only the original synthetic course exercise at https://top1os.dev/ supplies the case figures. No new empirical reading, real participants, company records, Indian legal clearance, actual commitments or source completeness claimed.
