D80-D81 | Change the decision, not the story

SYNTHETIC private practice. All roles, figures, observations and artifacts are invented. No real founder contact, interview, recording, spending, financing, signature or data access requested.

1 | Original case	Read the original D80-D81 exercise at https://top1os.dev/. The original exercise and rubric remain unchanged. Monetary units are lakh INR over the same 12-week horizon. Zero opening working capital, inventory, payables, tax or financing; all stated operating costs paid.
2 | Find the contradiction	A operating remainder 2.2 is not cash: receivables 2.4 and capex .8 leave endpoint cash -1. The dated cash trough is -4.5, not -1. B has higher sales but lower operating remainder; its dated peak and quality remain unknown.
3 | Accept O3, then revise	Rework 1 is extra to original variable costs and paid at day 56. Revised A operating 1.2, endpoint cash -2, dated peak draw 4.8. Do not add it twice or quietly shift the supplier payment. A fails the original operating and funding gates.
4 | Transfer and restore	Move rework from day 56 to day 14 without changing its cost: peak becomes 5.5 while endpoint remains -2. Set rework to zero; then increase it. Change quality denominator to zero and log insufficient evidence, not 100%. Restore the baseline.
5 | Evidence is not permission	20 invitees are not 20 customers: 4 paid tests / 20 invitees =20%, not population demand or interview conversion. 18/20 on-time =90% in this invented set only. Recording use needs actual permission even if economic gates pass.
6 | Keep dissent	Objections records O1-O8, proposed independent tests and fictional owners. These tests are not performed real research. A premortem generates possible pathways, not observed failure or measured probability. B is not an automatic winner; redesign/defer remain valid.
7 | Know what was tested	Failure log records authored LibreOffice tests only. Preserve your own attempted reasoning, correction and delayed transfer separately. No learner mastery, independent review or Excel/Sheets parity follows. Day0/30/60/90 roles are fictional and never release money.

Inputs | Original numbers, explicit revisions

Yellow cells are editable. All numbers synthetic. Structural validity is not source accuracy, feasibility or permission. Rework is a separate incremental burden, not already included in A variable cost.

A recognized revenue	8.00
A original variable cost	4.80
A avoidable fixed cost	1.00
A collections	5.60
A capex	0.80
B recognized revenue	10.00
B variable cost	6.00
B avoidable fixed cost	2.00
B collections	7.00
B capex	1.50
New extra A rework cost	1.00
Rework paid at checkpoint day	56.00
Proposed operating target	2.00
Proposed maximum cash draw	3.00
Proposed on-time fraction	0.90
Eligible A deliveries	20.00
On-time A deliveries	18.00
Invited prospects	20.00
Completed paid tests	4.00
Inputs structurally valid? (1=yes)	1.00

Inputs require nonnegative monetary assumptions, counts as whole numbers, numerators no greater than denominators and 0..1 quality target. Zero denominators are structurally allowed but fractions stay undefined. Day must match one of the six checkpoints. All actual rights/quality/funding evidence stays separate.

Bridges | Operating remainder is not cash

Same 12-week basis. Before depreciation, interest and tax; not net income. Only the specified costs/collections/capex are modeled. Rework paid within this window.

Measure	Original A	Revised A	Original B
Recognized revenue	8.00	8.00	10.00
Stated variable costs including rework	4.80	5.80	6.00
Avoidable fixed costs	1.00	1.00	2.00
Operating remainder	2.20	1.20	2.00
Collections	5.60	5.60	7.00
Receivables	2.40	2.40	3.00
Capex	0.80	0.80	1.50
Endpoint project cash	-1.00	-2.00	-2.50
Cash via operating / AR bridge	-1.00	-2.00	-2.50
Bridge residual (zero expected)	0.00	0.00	0.00

Revenue for operating target, revised A	10.00

Revenue 10 meets target 2 only if original variable rate stays 60% and extra rework stays fixed at 1. This is algebra, not a sales forecast, collection schedule or funded redesign. Negative receivables would signal inconsistent simplified assumptions requiring investigation, not actual negative customer debt.

Ledger | Funding fails before the endpoint

Only these simultaneous dated net events, zero opening project cash. No financing, hidden obligations or intraday ordering modeled. Yellow event amounts are editable; reconcile totals with Bridges.

Day	Collections	Original variable	Fixed cost	Capex	Extra rework	Original cash	Revised cash
0	0.00	0.00	0.00	0.80	0.00	-0.80	-0.80
14	0.00	1.60	0.00	0.00	0.00	-2.40	-2.40
28	0.00	1.60	0.50	0.00	0.00	-4.50	-4.50
42	2.80	0.00	0.00	0.00	0.00	-1.70	-1.70
56	0.00	1.60	0.50	0.00	1.00	-3.80	-4.80
84	2.80	0.00	0.00	0.00	0.00	-1.00	-2.00
Totals	5.60	4.80	1.00	0.80	1.00		
Events valid?	1.00						
Reconciled?	1.00						
Peak draw						4.50	4.80
Endpoint						-1.00	-2.00

Baseline original cash -.8/-2.4/-4.5/-1.7/-3.8/-1. Revised day 56 extra1 gives -.8/-2.4/-4.5/-1.7/-4.8/-2. Reconciled=0 blocks funding-gate conclusions even if the event ledger itself calculates. B has no dated cash schedule; its peak remains UNKNOWN.

Gates | A formula pass cannot waive unknowns

All target thresholds are invented preferences. Results are conditional classroom screens, not permission. A small invented quality set does not establish future reliability.

Screen	Original A	Revised A	Original B
Operating target met? (1=yes)	1.00	0.00	1.00
Dated peak draw	4.50	4.80	UNKNOWN
Peak <= proposed limit?	0.00	0.00	UNKNOWN
On-time fraction	90.00%	90.00%	UNKNOWN
Quality target met?	1.00	1.00	UNKNOWN
Known numeric gates all pass?	0.00	0.00	UNKNOWN
Paid tests / invitees	20.00%		

0=failed numeric screen, 1=passed this screen only, UNKNOWN=missing case evidence, #N/A=undefined/invalid input or unreconciled model. B is never an automatic winner. All real spending, customer access, recording, research and disclosure permissions remain unresolved outside this lab.

Counterexample: move extra rework to day 14, keeping totals: revised peak 5.5 while end remains -2. If you edit amounts, keep Bridges and ledger totals consistent before using gates. Any staged redesign needs its own complete cost, collection, capacity and quality case; no supplier obligation is silently shifted.

Objections | Preserve the strongest contrary evidence

Eight invented records from the original case. Proposed tests and owners are classroom roles, not actual interviews, quotations, completed research or permission. Keep original claim plus changed conclusion.

ID	Type / original claim	Synthetic contradiction	Proposed test / alternative	Owner / review point	Changed conclusion
O1	Demand: 20 customers	Only 4 paid tests among 20 invitees. Invitation is not payment.	Reconcile invitations, completed tests, invoices and payment. Alternative: interest without buying power.	Evidence role / day 0	Correct to 4/20; repeat use unknown.
O2	Timing: profit funds day 0	Costs precede receipts; original dated trough -4.5.	Trace dated original receipts/payments. Alternative: late receipts worsen draw.	Cash role / day 0,30	Funding gate fails despite end -1.
O3	Cost: original cost complete	Extra rework 1 paid day 56 was omitted.	Confirm outside original variable cost; add once. If volume-linked, change cost model.	Cost role / day 30,60	Operating 1.2 / peak 4.8/end -2.
O4	Demand: liked prototype	No repeat-use/payment or buying-authority evidence.	Seek authorized repeat-payment records, not agreeable quotes. Alternative: politeness.	Demand role / day 30	No validated repeat demand.
O5	Permission: recordings usable	Verified permission/allowed-use record absent.	Verify actual scope before any affected use. Do not gather or export recordings here.	Rights role / day 0,60	Affected real use blocked.
O6	Strategy: B sales larger	B operating 2 < A original 2.2; B peak/quality unknown.	Need own dated cash/quality case. Alternative: higher sales consume more funding.	Finance role / day 30	No automatic switch to B.
O7	Presentation: unreadable slide	Readability issue does not erase factual contradictions.	Fix labels, then re-check numbers and dissent independently.	Presentation role / day 60	Improve slide, retain failed gates.
O8	Authority: positive numbers suffice	Model has no actual spending/contract/participant grant.	Verify real owner and scope separately before affected real work.	Sponsor role / day 90	No capital release or sign-off.

Revised recommendation frame: do not continue A on original gates; B remains incomplete. Redesign/defer pending a coherent funded/quality case and actual rights. Strongest unresolved objection: missing demand/rights/quality evidence cannot be repaired by cosmetic persuasion. Premortem pathways are hypotheses, never summed as measured failure probability.

Failure log | Authored execution, not learner evidence

Native calculations are tested before publishing. Keep your attempted answer, error cause, correction, strongest contrary evidence and delayed changed-context prompt separately.

Test / context	Observed authored outcome
Baseline bridges / ledger / gates	PASS: original/revised A and B bridges, every dated cash checkpoint, target algebra, fractions and gates matched exact rational calculations. B peak/quality stayed UNKNOWN.
Rework timing transfer	PASS: rework 1 moved day 56 to 14 gives peak 5.5, same endpoint -2. No new cash created. Restored.
Zero / increased rework	PASS: zero rework restores original ledger; costs 2 and 0.5 change operating, peak and algebra without double counting. Restored.
Zero quality denominator	PASS: 0/0 quality is undefined, never 100%; all-pass conclusion suppressed. Restored.
Zero invitee denominator	PASS: 0/0 paid-tests/invitees undefined, not a demand estimate. Restored.
Invalid financial/count/day inputs	PASS: 10 invalid financial/day/target/count inputs rejected; zero revenue makes rate-based revenue target undefined. Restored.
Unreconciled ledger	PASS: changed event totals leave Reconciled=0 and funding gates undefined. Negative/text/blank cash events rejected. Restored.
Broken formula reference	PASS: broken running-cash reference propagates to peak and funding gate, not false numeric approval. Restored.
Restored baseline	PASS: all baseline formulas restored. Authored native execution only, not independent learner mastery or spreadsheet-app parity.

Original synthetic source: D80-D81 at https://top1os.dev/. No new external empirical source is asserted by this artifact. Reuse original curriculum framing only. Native LibreOffice execution cannot establish independent learner transfer, Excel/Sheets parity, current company facts, permission or actual approval.
