D173 / D175 / D177 | Preserve the version

PRIVATE SYNTHETIC Indian SME case. Lakh INR, one fixed quarter. Original exercises and rubrics retained. No actual audit, panel, sponsor, data room, financing or learner assessment.

Three independent versions	Case-v1 is the original fixed quarter. D175 Case-v2 changes ONLY closing AR 16 to 22. D177 Case-v2 changes ONLY closing inventory 15 to 19. They are separate corrections, not a combined case. Do not import one into the other.
No balancing plug	Cash derives from direct and indirect CFO, capex and principal. Equity derives from opening equity plus income. Closing assets and liabilities/equity reconcile without forcing cash positive. A balance alone cannot prove the inputs are true.
Original and corrected	Base NI 6, collections 54, purchases 39, supplier cash 37, CFO -1, ending cash 9. AR correction: collections 48, CFO -7, cash 3. Inventory correction: purchases 43, supplier cash 41, CFO -5, cash 5. All assets stay 78 and NI stays 6.
Decision effect	Proposed floor 5: AR correction fails by 2; inventory correction is exactly at the floor with no headroom, not a breach. No lender, legal right or budget is approved. Defer/revise/conditional financing require separate evidence and authority.
Authored sensitivity only	An additional AR 12 scenario gives collections 58/CFO 3/cash 13; it is an invented controlled sensitivity, not new company evidence. Inputs can vary each correction independently and must be restored. Exact dated minimum/peak cash remains UNKNOWN.
Actual work stays blank	Attempts holds no invented learner errors, confidence, reviewer feedback or delayed results. Memo/Defense are authored examples. Choose two practice targets explicitly if actual item-level evidence is absent, not a claimed weakness profile.
No silent execution	Fictional day 0/30/60/90 roles review evidence, cash and rights. No business contact, data upload, recording, meeting, actual panel, contract or spending. Reproducible classroom package does not mean financial audit or overall 10/10.

Inputs | Versions are independent columns

Yellow values editable. Every value Case-v1 assumption unless the column identifies a correction/sensitivity. One quarter, lakh INR. No tax, interest, depreciation, dividends or omitted flows.

Input / lakh INR	Original v1	D175 AR v2	D177 stock v2	Extra AR sensitivity
Opening cash	20.00	20.00	20.00	20.00
Opening receivables	10.00	10.00	10.00	10.00
Opening inventory	12.00	12.00	12.00	12.00
Opening net equipment	30.00	30.00	30.00	30.00
Opening payables	8.00	8.00	8.00	8.00
Opening debt	15.00	15.00	15.00	15.00
Opening equity	49.00	49.00	49.00	49.00
Quarter recognized revenue	60.00	60.00	60.00	60.00
Quarter fixed COGS	36.00	36.00	36.00	36.00
Operating expense paid	18.00	18.00	18.00	18.00
Closing receivables	16.00	22.00	16.00	12.00
Closing inventory	15.00	15.00	19.00	15.00
Closing payables	10.00	10.00	10.00	10.00
Equipment capex paid	8.00	8.00	8.00	8.00
Debt principal repaid	2.00	2.00	2.00	2.00
Proposed endpoint floor	5.00	5.00	5.00	5.00
Inputs structurally valid? (1=yes)	1.00	1.00	1.00	1.00

Negative computed cash is a funding result, not an input to hide. Missing/text/negative values, unbalanced opening ledger, impossible collection/purchases/payment or over-repayment suppress outputs. Structural validity does not authenticate the assumptions.

Statements | Derive, never plug

Same quarter and exclusions. Cash comes from actual modeled movements; equity from earnings, not an assets-minus-liabilities plug. No impairment/revenue correction is assumed.

Measure / lakh INR	Original v1	D175 AR v2	D177 stock v2	AR 12 sensitivity
Opening assets	72.00	72.00	72.00	72.00
Opening liabilities + equity	72.00	72.00	72.00	72.00
Net income	6.00	6.00	6.00	6.00
Collections	54.00	48.00	54.00	58.00
Purchases	39.00	39.00	43.00	39.00
Supplier cash payments	37.00	37.00	41.00	37.00
Direct operating cash	-1.00	-7.00	-5.00	3.00
Indirect operating cash	-1.00	-7.00	-5.00	3.00
Investing cash (capex)	-8.00	-8.00	-8.00	-8.00
Financing cash (principal)	-2.00	-2.00	-2.00	-2.00
Total cash movement	-11.00	-17.00	-15.00	-7.00
Closing cash	9.00	3.00	5.00	13.00
Closing receivables	16.00	22.00	16.00	12.00
Closing inventory	15.00	15.00	19.00	15.00
Closing equipment	38.00	38.00	38.00	38.00
Closing payables	10.00	10.00	10.00	10.00
Closing debt	13.00	13.00	13.00	13.00
Closing equity	55.00	55.00	55.00	55.00
Closing assets	78.00	78.00	78.00	78.00
Closing liabilities + equity	78.00	78.00	78.00	78.00

NI remains 6 when only receivables or closing stock changes under FIXED stated COGS. A correction to COGS/revenue/impairment would require new inputs and a different income/equity result. Never infer a write-off merely from slower collections.

Audit | Identities and distinct corrections

Zero residuals required. Fail-closed validity flag is a spreadsheet control, not audit assurance, authorization or verification of company records.

Check / expected zero	Original	AR correction	Stock correction	AR 12 sensitivity
Opening balance residual	0.00	0.00	0.00	0.00
Closing balance residual	0.00	0.00	0.00	0.00
Direct minus indirect CFO	0.00	0.00	0.00	0.00
Cash roll-forward residual	0.00	0.00	0.00	0.00
Receivable roll-forward residual	0.00	0.00	0.00	0.00
Inventory / purchases residual	0.00	0.00	0.00	0.00
Payable / cash payment residual	0.00	0.00	0.00	0.00
Equity / net-income residual	0.00	0.00	0.00	0.00
Equipment roll-forward residual	0.00	0.00	0.00	0.00
Debt roll-forward residual	0.00	0.00	0.00	0.00
Reconciled valid? (1=yes)	1.00	1.00	1.00	1.00

A balanced model can still contain incorrect inputs or shared errors. Compare independent exact arithmetic and controlled source changes, then inspect the changed decision. Deliberate broken-reference tests must fail; never replace errors with plausible zeros.

Decision | Floor failure differs from equality

Proposed cash floor 5 is fictional. Dated minimum/peak cash, future receipts, lender availability, outcome benefits and real authority remain UNKNOWN. A positive endpoint is not full solvency.

Screen / lakh INR	Original	AR correction	Stock correction	AR 12 sensitivity
Closing cash	9.00	3.00	5.00	13.00
Cash change versus original	0.00	-6.00	-4.00	4.00
Floor margin	4.00	-2.00	0.00	8.00
Endpoint floor met? (1=yes)	1.00	0.00	1.00	1.00
Endpoint shortfall (not peak funding)	0.00	2.00	0.00	0.00
Dated minimum / peak funding	UNKNOWN	UNKNOWN	UNKNOWN	UNKNOWN
Lender / spend / source rights	UNKNOWN	UNKNOWN	UNKNOWN	UNKNOWN

AR correction cash 3 fails by 2. Stock correction cash 5 equals floor 5: no breach, no surplus headroom. All assets stay 78 because cash is exchanged for AR or stock, not created. No implied loan or approval follows from a shortfall calculation.

Next-quarter alternatives are mutually exclusive: defer / discovery-only cost 2 / staged-growth cost 6. These incremental expenses are NOT in the preceding fixed quarter. Their benefits, next-quarter baseline cash flows, obligations and approval are missing; do not manufacture full next-quarter ending cash by subtracting costs from 9.

Evidence | Input, cell, version, consequence

Numbered private index. All figures are synthetic Case-v1/v2 assumptions. Build date 13 November 2026 is not a company observation, independent source date or audit opinion.

E01 | Original case	D173 original exercise at https://top1os.dev/. Inputs B6:B21 -> Statements B6:B25 -> Audit B6:B17 -> Decision B6:B10. Opening 72/72; closing 78/78; NI 6/CFO-1/cash 9. No uploaded customer/payroll/bank records.
E02 | AR correction	D175 independent Case-v2: Inputs C16=22 versus original B16=16, all other inputs matched. Source status: invented contradictory-evidence variant. Collections 48/CFO-7/cash 3; profit 6/assets 78. Keep old version and do not infer impairment.
E03 | Stock correction	D177 independent Case-v2: Inputs D17=19 versus B17=15, closing AR stays16. Purchases 43/supplier 41/CFO-5/cash 5; profit 6/assets 78. Does not include D175 correction. A combined case needs explicit new version and inputs.
E04 | Extra sensitivity	Authored controlled AR 12 case, not in original data: Inputs E16=12. Collections 58/CFO 3/cash 13; income 6/assets 78. Downside is original D175 AR 22 correction. No probability assigned and no validated forecast claimed.
E05 | Source fields still needed	For real evidence record author/publisher, document and retrieval dates separately, exact page/table/definition/unit/window, actual/estimate/assumption, reviewer and downstream cells. Original case has no empirical document for invented numbers: do not fabricate one.
E06 | Evidence-room limits	No new empirical source reading claimed; existing original curriculum framing retained. A list of files does not establish completeness, current legal applicability, permitted audience, company truth or independent review. Real sources/permissions remain unresolved.

Impact | Preserve old reasoning, recompute the path

Each correction is independent. Formula outputs must move with changed inputs and retain unaffected definitions. No superseded export is silently treated as current.

I01 | AR 16 to 22	C16 +6 -> collections -6 -> direct/indirect CFO -6 -> cash -6 to 3. Closing AR +6 offsets cash -6, assets remain 78; income/equity unchanged. Decision floor margin changes +4 to-2, so old cash 9 cannot support current pass.
I02 | Inventory 15 to 19	D17 +4 -> purchases +4 -> supplier cash +4 -> CFO/cash -4 to 5. Stock +4 offsets cash -4, assets remain 78. Fixed COGS means income 6 unchanged. Floor equality is not a breach, but no headroom remains.
I03 | Different correction	If new evidence changes COGS, revenue, accruals, impairment or tax, define a fresh version and propagate the changed income/equity/cash effects. Neither AR timing nor stock purchase correction automatically changes stipulated profit.
I04 | Version cutoff	Base B, AR C and stock D are parallel reference columns. Keep original export and correction log with a version label. Quarantine outdated conclusions after a correction, not delete original evidence. This workbook does not claim a real data room has been organized.
I05 | Recommendation reversal	AR cash 3 under floor 5 -> revise/defer pending supported lawful options and actual authority. Stock cash 5 -> preserve caution; any extra outflow without offset breaches. A numeric pass never removes missing dated cash, source or permission gates.
I06 | Actual review gap	No real reviewer identified a material weakness or learner corrected an error here. Authored weakness: absent dated cash/benefit/rights evidence could change the decision even if formulas reconcile. Actual objection, old/new view and reviewer date stay blank in Attempts.

Memo | Revise or defer, not authorize

Authored private conditional decision memo for original D173/D175/D177 practice. All sponsor/finance/source/panel roles are fictional. No real financing, execution or distribution.

Decision and basis	Do not defend old cash 9 after the relevant correction. D175 AR v2 ends 3 below floor 5; D177 stock v2 ends 5 at the floor. Keep, revise or defer based on the correct independent version; no unconditional funded launch is supported.
Alternatives on same scope	Next 90 days: defer / discovery-only 2 / staged growth 6, mutually exclusive incremental expenses. Compare evidence, reversibility, committed liabilities, costs and benefit uncertainty. No next-quarter operating forecast or actual budget grant is supplied; no automatic winner by cash alone.
Strongest authored objection	The statements balance and profit is6, so why not proceed? Response: AR or stock absorbs cash; income is not operating cash. AR correction fails endpoint floor; stock equality leaves no cushion. Missing dated flows, benefits and rights remain material.
Day 0 / source role	Freeze version, units and numbered evidence map. Stop reliance on unverified or mismatched source inputs. No private source collection or data-room disclosure without actual allowed use and audience.
Day 30/60 / finance role	Reconcile direct/indirect cash and both balance sheets; rerun independent AR/stock and changed-context tests. Obtain a full dated schedule before claiming cash never crosses the floor. Stop on invalid formula or unsupported funding.
Day 90 / sponsor-rights role	Review evidence, obligations and conditional scope alternatives. Real owner/lender/legal/budget decisions remain separate; a fictional role or completed rubric cannot supply them. No actual milestones, appointments or approvals are recorded.

Defense | Invented questions, not a real panel

Authored skeptical-panel transcript examples. No actual interview, recording, elapsed practice time, sponsor feedback or reviewer signoff. All answers cite the selected model version.

Invented Q1 | Profit means cash?	Authored answer: no. Base Statements B8=6 versus B12=-1 and B17=9. Working capital absorbs 7 before capex 8/principal 2. Claim/input E01, uncertainty: actual records and dated timing absent. Keep caution, not a launch approval.
Invented Q2 | Why AR changes cash?	C16=22 under E02 means collections 48, CFO-7, cash 3; assets 78/profit 6 unchanged. Collection delay is not automatically bad debt. Strongest objection: maybe impairment is needed, but no evidence for that adjustment exists in the stipulated case.
Invented Q3 | Inventory is expense?	Under E03 fixed COGS 36, stock 19 increases purchases 43/payment 41, not COGS. CFO-5/cash 5, profit 6/assets 78. If COGS is corrected instead, use new evidence/version and recompute income/equity. Do not import AR 22 from D175.
Invented Q4 | At floor means fail?	Decision D8=0 and D9=1: equality at 5 is not a breach. It leaves no extra headroom and cannot prove a dated minimum. Keep/revise/defer depends on full obligations, evidence and actual authority, not a confident performance.
Invented Q5 | Balanced means audit?	No. Shared bad inputs or copied plugs can still balance. Use lineage, independent changed-input tests, exact definitions and real source review. Model QA is not an audit opinion, source completeness or learner mastery.
Invented Q6 | What would change view?	A reconciled dated cash plan, supported benefits/obligations and actual rights/funding decisions could change the conditional recommendation. Preserve original answer, correction/disagreement, downstream effect and strongest objection when an actual learner review occurs.

Attempts | No learner history is invented

Two practice targets may be selected explicitly when actual item-level evidence is absent: accrual-to-cash and source-change propagation. They are NOT an inferred weakness diagnosis.

Actual date / version	Original response / work	Expected / observed error	Cause / confidence	Corrected cells / outputs	Objection / changed view	New prompt / actual delayed result

Future closed-notes prompt: change payable timing instead of copying the AR correction. Explain cash, liabilities and unchanged profit under consistent purchases. A correct attempt stays correct; do not fabricate an error. Another prompt changes COGS and asks why income/equity now move. No retest or elapsed delay has occurred.

Failure log | Authored model execution only

Failure log records executed authored native tests. It is not actual learner mistakes, independent human review, financial audit, Excel/Sheets parity or overall 10/10.

Controlled test	Observed authored outcome
Baseline / three independent variants	PASS: four independent exact-rational statement, identity and floor cases.
AR correction +1 / restore	PASS: independent recomputation of income, cash, balance sheets and floor; restored.
Stock correction +1 / restore	PASS: independent recomputation of income, cash, balance sheets and floor; restored.
Payable timing +1 / restore	PASS: independent recomputation of income, cash, balance sheets and floor; restored.
COGS +1 / restore	PASS: independent recomputation of income, cash, balance sheets and floor; restored.
Invalid text / blank / negative / limits	PASS: blank/text/negative/impossible input blocked; no fake zero output.
Unbalanced opening ledger	PASS: opening cash+1 without equity rejects unbalanced opening ledger.
Broken CFO reference / audit block	PASS: broken CFO reference blocked reconciled flag and decision output.
Restored / actual attempts blank	PASS: baseline/independent corrections restored. Actual learner attempts remain blank.

Reference source is the original synthetic D173/D175/D177 exercise at https://top1os.dev/. All author-created assumptions are labeled; no empirical source/date, actual learner feedback or permission invented. Reproducible does not mean independently verified in every application.
