D82-D83 | Growth is not incremental cash

SYNTHETIC private 90-day practice, lakh INR. Original cases/rubrics retained. No actual board meeting, resolution, financing, disclosure, rehearsal time or company data claimed.

One counterfactual	Existing plan and growth totals share one 90-day basis. Incremental means growth minus existing, not growth total. Operating remainder is before depreciation/interest/tax, not net income.
State the exclusions	No opening working capital, inventory, payables, taxes or financing; all stated operating costs paid. Future avoidable costs belong in comparison; historical sunk costs do not. Full real accounts need their own bridge.
Find the real failure	Growth operating 5.8 is only 2.8 incremental. Receivables increase 5.4 and capex 3 consume cash 5.6. Opening 8 ends 2.4, but dated minimum .6 fails floor 2. End cash cannot replace the timing test.
Keep quality separate	Existing 19/20=95%; growth 27/30=90% fails proposed 95%. Invented small sets do not establish causality, future reliability or population quality. Zero denominator means insufficient evidence.
Transfer and restore	Add 2 opening cash, then restore 8. Separately shift 2 collections from day 90 to 30, preserving total 33.6: minimum 2.4 passes cash floor, yet quality still fails. No real financing or collection acceleration is authorized.
Downside is not a schedule	Revenue 36, costs 21.6/11, collections 25.2, capex 3 gives operating 3.4, increment .4, AR 10.8, movement -10.4 and ending company cash -2.4. Downside event dates absent; peak stays UNKNOWN.
Defend without inventing proof	Eight-slide packet is a practice aid. Choose a timer limit and record actual elapsed only when performed; none measured here. Keep strongest objection, revised choice and fictional day 0/30/60/90 evidence/quality/cash/rights owners. No capital release.

Inputs | Totals, thresholds and denominators

Yellow cells editable, all invented. Same 90-day window. Structural validity is not verified demand, cash timing, quality or actual rights.

Existing recognized revenue	30.00
Existing variable costs	18.00
Existing avoidable fixed	9.00
Existing collections	27.00
Existing new capex	0.00
Growth TOTAL recognized revenue	42.00
Growth TOTAL variable costs	25.20
Growth TOTAL avoidable fixed	11.00
Growth TOTAL collections	33.60
Growth TOTAL new capex	3.00
Downside TOTAL revenue	36.00
Downside TOTAL variable costs	21.60
Downside TOTAL avoidable fixed	11.00
Downside TOTAL collections	25.20
Downside TOTAL new capex	3.00
Opening unrestricted company cash	8.00
Proposed minimum company cash	2.00
Proposed incremental operating target	2.50
Proposed on-time fraction	0.95
Existing eligible deliveries	20.00
Existing on-time deliveries	19.00
Growth eligible deliveries	30.00
Growth on-time deliveries	27.00
Inputs valid? (1=yes)	1.00

Nonnegative monetary values, whole delivery counts, on-time count <= eligible count, quality target 0..1. Zero denominator allowed structurally but fractions undefined. Editing financial totals requires reconciliation of the growth event ledger before funding conclusions.

Bridges | Compare growth with existing

All columns share 90 days, lakh INR. Growth and downside are TOTALS; increments subtract the same existing counterfactual. No depreciation/interest/tax included.

Measure	Existing	Growth total	Increment	Downside total	Downside increment
Recognized revenue	30.00	42.00	12.00	36.00	6.00
Variable costs	18.00	25.20	7.20	21.60	3.60
Avoidable fixed	9.00	11.00	2.00	11.00	2.00
Operating remainder	3.00	5.80	2.80	3.40	0.40
Collections	27.00	33.60	6.60	25.20	-1.80
Receivables	3.00	8.40	5.40	10.80	7.80
New capex	0.00	3.00	3.00	3.00	3.00
Project cash movement	0.00	-5.60	-5.60	-10.40	-10.40
Cash via operating / AR bridge	0.00	-5.60	-5.60	-10.40	-10.40
Bridge residual (zero expected)	0.00	0.00	0.00	0.00	0.00

Growth 5.8 operating is not 5.8 new value; increment 2.8. Growth movement -5.6 equals incremental movement only because existing movement 0 here. Downside end cash -2.4 is not its exact minimum; dates absent. Negative modeled company cash flags a gap, not an approved overdraft.

Ledger | Ending above floor is insufficient

Only simultaneous dated net events. Company cash = opening unrestricted cash + project movement. Unlisted obligations and intraperiod ordering remain unknown.

Day	Collections	Variable cost	Fixed cost	Capex	Net event	Project cumulative	Company cash
0	0.00	0.00	0.00	3.00	-3.00	-3.00	5.00
30	8.00	8.00	3.50	0.00	-3.50	-6.50	1.50
60	11.00	8.40	3.50	0.00	-0.90	-7.40	0.60
90	14.60	8.80	4.00	0.00	1.80	-5.60	2.40
Totals	33.60	25.20	11.00	3.00	-5.60		
Valid events?	1.00						
Reconciled?	1.00						

Minimum company cash	0.60
Maximum reduction from opening	7.40
Ending company cash	2.40
Endpoint project movement	-5.60

Baseline opening 8 gives company balances5/1.5/.6/2.4; minimum .6 fails proposed 2 though ending 2.4 passes. Maximum reduction 7.4 differs from endpoint movement -5.6. Reconciled=0 suppresses funding-gate conclusions. This is not a full actual liquidity schedule.

Gates | Cash, quality and permission are separate

1=passes this numeric screen only;0=fails;UNKNOWN=missing evidence;#N/A=invalid/undefined/unreconciled model. No actual adoption or capital release follows.

Screen	Growth	Downside
Incremental operating target met?	1.00	0.00
Dated minimum company cash	0.60	UNKNOWN
Cash floor met at supplied checkpoints?	0.00	UNKNOWN
On-time fraction	90.00%	UNKNOWN
Quality target met?	0.00	UNKNOWN
All known numeric gates pass?	0.00	UNKNOWN
Ending company cash	2.40	-2.40
Existing on-time fraction	95.00%	

Growth operating passes 2.5 but cash/quality fail; do not adopt unconditionally. Downside endpoint cash already negative, so cannot pass a no-financing funding case; absent dates remain UNKNOWN rather than inventing exact peak. Real governance, recording/data use and financing require separate actual authority.

Thresholds | A required revenue is not demand

Hold growth variable-cost ratio fixed, growth fixed cost unchanged. No claim that target sales, collection timing, capacity or quality is achievable.

Growth variable-cost rate	60.00%
Contribution fraction	40.00%

Total operating breakeven revenue	27.50
Revenue to match existing operating	35.00
Revenue for incremental operating target	41.25

Baseline thresholds 27.5/35/41.25 correspond to zero total operating, existing 3 operating, and existing 3 plus incremental target 2.5. None clears funding or quality. If variable costs scale differently, fixed costs change or market capacity constrains sales, use a different supported model.

Eight-slide companion: decision/alternatives; baseline/changed inputs; incremental bridge; dated company cash; quality/denominators; downside/thresholds; recommendation/strongest objection; action register/rehearsal. Suggested six-minute practice limit is a choice, not elapsed time. No timed defence performed.

Failure log | Model tests are not a board defence

Original synthetic D82-D83 case at https://top1os.dev/. No new empirical source, actual timer, learner response, panel review, real approval or spreadsheet-app parity claimed.

Test / context	Observed authored outcome
Baseline exact comparisons	PASS: baseline/growth/downside/increments, every dated cash event, quality gates and 27.5/35/41.25 thresholds match independent exact-rational arithmetic.
Opening-cash transfer	PASS: opening 10 gives minimum 2.6 and clears supplied cash screen; quality still fails. No financing created. Restored 8.
Collection-timing transfer	PASS: shift 2 collections day 90 to 30, same total 33.6: minimum 2.4 / end 2.4; quality still fails. Timing is hypothetical, not a negotiated collection. Restored.
Zero delivery denominators	PASS: 0/0 existing/growth quality undefined, all-pass suppressed, not 100%. Restored.
Quality transfer	PASS: 29/30 clears quality but failed minimum cash still blocks numeric all-pass. Restored.
Invalid inputs / event entries	PASS: 8 invalid financial/count/target inputs and 3 negative/text/blank ledger entries suppress results; restored.
Unreconciled cash totals	PASS: changed collection total breaks reconciliation and suppresses funding conclusions. Restored.
Broken reference / undefined rate	PASS: broken running-cash reference propagates; zero revenue or zero contribution leaves required revenue undefined. Restored.
Restored baseline	PASS: all baseline results restored; authored native execution only, not a real timed defence, learner mastery, app parity or actual approval.

Keep own attempted reasoning/error/cause/correction and delayed changed-context retest. Fictional evidence/cash/quality/rights owners at day 0/30/60/90 never create real commitments. Authored workbook and deck cannot establish independent learner transfer, full audiovisual/source coverage or overall 10/10.
