D 146 | Reconcile the claim before ranking it

PRIVATE FICTIONAL offline diligence lab. Money millions. No actual manager, performance verification, reference outreach, investment decision or commitment.

Complete population	Four invented deals: cost 90, proceeds 60, residual 60, total value 120; gross portfolio multiple 1.333333. Excluding the 30-cost total loss makes selected cost 60 and multiple 2.0, not the complete record. Inclusion flags illustrate selection only, not permission or personal attribution.
Net investor bridge	Investor paid 100 = portfolio cost 90 + fees 10. Portfolio proceeds 60 less assumed paid carry 10 gives investor distributions 50. Portfolio NAV 60 less assumed accrued carry 5 gives investor NAV 55. Net DPI .5, RVPI .55, TVPI 1.05. Carry is an input assumption, not an LPA computation.
Stress the marks	Markdown 25% applies only to portfolio residual 60 =>45. Stipulated accrued carry remains 5, so net NAV 40 and TVPI .9; DPI .5 unchanged. Carry is not automatically recalculated. No IRR without dated cash flows or a validated facility/currency treatment.
Different original case	Original exercise separate aggregate paid 100/distributions 30/net NAV 120 gives DPI .3, RVPI 1.2, TVPI 1.5; net NAV haircut 25% gives TVPI 1.2. Do not substitute those investor marks for this new portfolio-before-carry dataset.
Equity, not enterprise	EV 100 - debt 20 + cash 5 = equity 85. Ordinary ownership 10% gives 8.5; after stipulated 20% relative ownership dilution, 8% gives 6.8. No preferences, tax, transaction costs or debt-like adjustments modeled. Floor is limited-liability toy, not a liquidation waterfall.
Evidence before score	Public announcement proves reported participation only. Separate manager role, employer permission, full population, realized cash, valuation and dates. DDQ yes/no is a lead, not verdict. References remain a paper plan with no contact names. No universal LP preference or causal manager-outperformance claim.

Inputs | Investor bridge and separate equity toy

Millions. Shaded cells editable. No dates or facilities. Rate inputs fractions; carry values are stipulated amounts, not a calculated entitlement.

Investor total contributions, including fees	100.000000
Investor fees paid from contributions	10.000000
Assumed realized carry withheld from portfolio proceeds	10.000000
Assumed accrued carry deducted from residual marks	5.000000
Portfolio residual markdown fraction	0.250000

Separate exit enterprise value	100.000000
Separate debt	20.000000
Separate cash	5.000000
Separate ordinary ownership before dilution	0.100000
Relative ownership dilution fraction	0.200000

Investor numeric/reconciliation gate	1.000000
Equity numeric gate	1.000000

Invalid portfolio inputs block investor bridge, not separate equity toy. Numeric validity does not verify source completeness, prior-employer permission, legal carry, valuation, audit or a manager. Portfolio selection flags are not evidence status.

Portfolio | Keep the loss in the denominator

All four rows fictional. Shaded selection flags illustrate cherry-picking only. Full-population totals ignore selection. No personal deal attribution implied.

Deal	Cost INPUT	Cash proceeds INPUT	Residual INPUT	Selected flag 0/1
A realized winner	20.000000	60.000000	0.000000	1.000000
B realized total loss	30.000000	0.000000	0.000000	0.000000
C unrealized	25.000000	0.000000	45.000000	1.000000
D unrealized	15.000000	0.000000	15.000000	1.000000

Portfolio numeric gate	1.000000
Complete population cost	90.000000
Complete population cash proceeds	60.000000
Complete population residual marks	60.000000
Complete total value	120.000000
Complete gross portfolio multiple	1.333333
Selected cost	60.000000
Selected total value	120.000000
Selected multiple, not full record	2.000000
Cost excluded by selected flags	30.000000
Selected minus complete multiple	0.666667

Full multiple 120/90=1.333333. Selected 120/60=2.0 hides the 30-cost loss; inclusion is not a rank, proof of skill, attribution or investment return to LPs. Flags must be exactly 0 or 1. Zero cost leaves that ratio undefined.

Investor | Distinguish cash, marks and costs

Authored calculation, not verified manager performance or actual investor proceeds. Ratios are not dated IRR.

Investor paid-in including fees	100.000000
Net distributions after stipulated paid carry	50.000000
Net residual after stipulated accrued carry	55.000000
Net DPI	0.500000
Net RVPI	0.550000
Net TVPI	1.050000
TVPI minus DPI minus RVPI, must be zero	0.000000
Markdown portfolio residual	45.000000
Stressed net residual, floor at zero	40.000000
Stressed net TVPI	0.900000
Stressed DPI, cash unchanged	0.500000
Net total value reduction	15.000000

Baseline distributions 50, NAV 55, DPI .5/RVPI .55/TVPI 1.05. Markdown portfolio NAV to 45, fixed accrued carry 5 => netNAV 40, TVPI .9, DPI .5. Floor is toy; no liability/carry reversal calculated. Fees change paid-in denominator; portfolio gross multiple is not ILPA fund-level gross MOIC.

Equity | Bridge before multiplying ownership

Authored calculation, not verified manager performance or actual investor proceeds. Ratios are not dated IRR.

Ordinary equity value before toy floor	85.000000
Limited-liability equity floor for this toy	85.000000
Ordinary proceeds before dilution	8.500000
Ownership after relative dilution	0.080000
Ordinary proceeds after dilution	6.800000
Ownership dilution proceeds difference	1.700000

EV 100-debt 20+cash 5=85; 10% ordinary share gives 8.5, after 20% relative dilution gives 8% and 6.8. Not EV times ownership. Not actual cap table, preferred security, tax, waterfall, exit forecast or fund performance. Negative equity maps to zero in limited-liability toy only.

Claims | Six separate verification problems

Fictional prompts, not actual evidence received or an investment-committee recommendation.

Participation versus role	Announcement says Fund X joined the round. Still missing actual cost, ownership at each date, lead/sourcing/diligence/board/decision role and contemporaneous records. Do not assign every predecessor firm winner to a departing manager.
Population and cutoff	Request on paper all realized/unrealized deals, losses, follow-ons, partial exits, write-offs and exclusions with rationale. Fix entity, reporting currency, cutoff, fees, carry, NAV policy and facility use. Independent permission still needed for private employer records.
Reconciliation	Fund investor cash flows should tie to financial statements and fund summary; deal flows to deal summaries. Identify differences, not plug entries. A complete table can still contain false valuations or missing deals; arithmetic pass is not diligence clearance.
Marked versus realized	Separate cash distributions, estimated residual and accrued carry. Ask who valued, policy changes, controls, third-party oversight and contrary evidence. Markdown is sensitivity, not current fair value or loss probability.
No proxy verdict	N/A for missing predecessor fund can be appropriate with explanation. Yes/no, frequent updates, team story, faster fundraise, strategy expansion or selected winners are leads, not fraud, skill, causation or a promised LP re-up.
Blocked conclusion	Classify each claim verified, reported, contradicted or unavailable only with actual evidence. Our entire manager is fictional: no actual status upgrades, confidential records, owner acceptance, investment approval or outreach inferred.

References | Design a permission-safe sample

Paper roles only. No names, contact details, implied permission, secret backchannels or messages sent.

Breadth	Consider co-investor, deal source, current/displaced founder, former colleague, LP and service-provider perspectives across successful, neutral and difficult outcomes. No single universally best reference and no entitlement to confidential information.
Source selection	Record who nominated the reference, relationship, period, direct observation and conflicts. A manager-selected positive reference is not an independent representative sample. Do not fabricate negative testimony or fill absent categories.
Scoped questions	What did this person directly observe about the manager role, decisions, support, difficult periods and information sharing? Separate firsthand behavior from hearsay, attribution and return claims. No request for protected former-employer files.
Permission and minimization	Before real outreach, obtain relevant permission, agree recipient/words and minimum disclosure, respect NDAs and data limits. Redacted, in-person or later-stage access may be reasonable. Staging is neither proof of concealment nor proof of a claim.
Handling disagreement	Preserve competing accounts and dates; ask what records could distinguish them. No averaging sentiment into a return forecast. Unresolved material disagreement blocks a real conclusion, rather than a made-up score.

Actual plan | Five rows deliberately blank

No actual manager diligence, private records, reference permission, accepted owner, investment authority or commitment.

Claim / entity	Source / cutoff	Evidence status	Gap / contradiction	Owner / acceptance	Permission / scope	Next check / stop

No invented evidence or approval. All real rows remain blank. Full source/AV/native cross-viewer/independent learner/account/field/legal/tax and actual overall 10 remain open. No outreach, investment, disclosure, account, spend or transfer.

Evidence | Scope the source, not its reputation

Six URLs, three organizations: association questionnaire/measurement, practitioner commentary and evaluation framework. Not six independent empirical studies.

ILPA DDQ 2.0	https://ilpa.org/wp-content/uploads/2021/11/ILPA-DDQ-2.0.pdf | November 2021. Downloaded selected 14.3-.7/15.1-.7 and AppendicesC 1-C 8/E 1-E 2/F 1-F 3; overview. Not full questionnaire, all appendices, diagrams or completed manager responses. F 2 separates lead/sourcing/diligence roles.
ILPA User Guide	https://ilpa.org/wp-content/uploads/2021/11/ILPA-DDQ-2.0-User-Guide.pdf | November 9, 2021 version 1.0, complete returned written guide. PE reference, not fully tailored VC/emerging-manager module. Not required law; N/A explanations, confidentiality/staging and follow-up matter.
ILPA current listing	https://ilpa.org/resources-tools/resource-library/due-diligence-questionnaire/ | Complete returned listing confirms offered 2.0 assets and 2023 DEI monitoring addition. Not a claim all newer specialized standards searched or adopted.
ILPA measurement	https://ilpa.org/wp-content/uploads/2025/04/ILPA-Performance-Template-Definitions-Granular-Methodology-v1.1.pdf | Selected investor cash flows/netIRR/netTVPI definitions, not full PDF. Actual investor flows/NAV/fees/carry/facility treatment differs from portfolio totals. No IRR implemented.
VCFactory and SideLetter	https://thevcfactory.com/emerging-vc-fund-managers/ | July 22, 2024 selected evaluation/track-record sections, not chart pixels, linked studies/podcasts or independently verified outperformance. https://thesideletter.co/lp-framework/ | Complete returned written framework, not universal LP rule; EV/ownership example omits debt/cash/preferences.
Limits	No empirical manager-selection model, causal returns result, universal stage return target, current legal compliance, actual data or account action. Authored formulas tested in LibreOffice only, not native Excel/Sheets parity or independent learners.

Failure log | Authored checks only

Filled after execution; not manager evidence, learner results, independent audit, investment clearance or legal opinion.

1	PASS: 31 baseline formulas independently recomputed.
2	PASS: 21 changed input sets plus restored baseline.
3	PASS: 20 invalid inputs/620 family-isolation checks.
4	PASS: 6 broken references/6 explicit checks.
5	PASS: portfolio/investor/equity independent gates tested.
6	PASS: 5 boundary sets including zero selected cost/negative equity.
7	PASS: complete loss/fees/paid versus accrued carry distinguished.
8	PASS: actual evidence/permission/accepted owner rows blank.
