D127 | Value is not a moat

FICTIONAL routing tool economics, separate company-reported ratio illustration. Attempt independently before the reference. No real system access, staff contact, investment, procurement, confidential data or spend.

Baseline economics	100,000 shipments times INR2 saves INR200,000 =2 lakh. Incremental support.6 and licence.4 lakh leave1 lakh. Pay.8 lakh now for ONLY1 lakh month-end inflow. Stipulated10% ONE-MONTH discount:NPV6/55=.109091 lakh. No perpetuity or annual-rate assumption.
Comparative claim	Positive modeled NPV versus stated alternative supports only a narrow V result, not R/I/O. If matched rivals use the same tool equally and can capture its benefits, the stipulated tool alone gives parity, not a sustained edge. Scale and intangibility are not tests.
Useful-life test	Imitation6months versus useful-life18 suggests erosion after6, not permanent advantage. Check viable substitutes, cost disadvantage and the comparison date. This timing comparison does not calculate a benefit stream or prove when profits disappear.
Bundle hypothesis	Separate fictional bundle7 gross minus2 operating minus1 coordination =4 lakh for one month. No individual-component or no-bundle outcomes supplied: positive bundle benefit does not identify complementarity or an interaction effect.
Unknown is not no	Gates use -1unknown,0no,1yes for V/R/I/O. Actual-evidence fields default unknown, independent of modeled NPV. Require defined resource, matched rivals, dated sources, useful horizon, alternative uses and ability/rights/process/incentives to capture value.
Scope	Actual learner/reviewer/transfer blank. Selected written sources only, not complete diagrams/video, independent company moat proof, Excel/Sheets parity, real participant/account/legal clearance or overall10/10. No actual activity authorized by a computed result.

Inputs | Explicit units and one payment

Synthetic case. Amounts lakh INR except shipments and INR per shipment. One initial payment and one month-end inflow only. No taxes, financing, residual value or other periods assumed.

Shipments in the one month	100000.00
INR saved per shipment	2.00
Incremental support, lakh INR	0.60
Incremental licence, lakh INR	0.40
Initial payment now, lakh INR	0.80
Stipulated ONE-MONTH discount rate	0.10
Rival replication time, months	6.00
Useful-life horizon, months	18.00

Operating inputs valid? (1=yes)	1.000000
Timing inputs valid? (1=yes)	1.000000
Horizon inputs valid? (1=yes)	1.000000

Discount rate greater than -1 is a mathematical domain, not a market-rate estimate. Zero shipments are allowed; fixed incremental costs still apply. Invalid timing must not erase valid operating arithmetic, and invalid horizons must not alter cash flows.

Savings | INR is not lakh INR

One-period incremental operating benefit. No fixed baseline overhead is subtracted unless it changes between stated alternatives.

Gross saving, INR	200000.000000
Gross saving, lakh INR	2.000000
Incremental operating costs, lakh INR	1.000000
Net month-end inflow, lakh INR	1.000000

Reconciliation difference, lakh INR	0.000000

Baseline2-.6-.4=1 lakh. This is not a comparator-adjusted advantage, a measured company saving, or permission to purchase. Negative net benefit remains visible instead of being floored at zero.

Timing | One month, not a perpetuity

Only initial payment now and net operating inflow at the end of one month. Modelled operating costs are already in the net inflow: do not deduct them twice.

PV of single inflow, lakh INR	0.909091
Net present value, lakh INR	0.109091
Undiscounted difference, lakh INR	0.200000
Initial payment ceiling for NPV=0	0.909091
Value versus stated cash-flow alternative	POSITIVE MODEL NPV

Baseline PV10/11=.909091,NPV6/55=.109091. Stipulated10% is for ONE MONTH, not annual10% divided by12. Positive NPV is conditional value versus the stated cash-flow alternative, not rarity, inimitability, organization or capital approval.

Replication | A clock is not a moat

Months, separate from the one-month cash-flow model. No multi-period benefit stream has been supplied.

Replication time divided by useful life	0.333333
Useful months after stated replication	12.000000
Timing comparison only	REPLICABLE WITHIN HORIZON

Baseline ratio1/3 and12 useful months after6. These are timing comparisons only. A faster substitute, rival cost disadvantage, performance differences and evolving useful life remain relevant. At/beyond18 does not prove impossible imitation, no substitute or permanent advantage.

Bundle | Net benefit is not interaction

Separate synthetic one-month case, lakh INR. No initial investment or discounting specified here. Do not pool this result with routing-tool NPV.

Bundle gross benefit	7.00
Bundle operating costs	2.00
Bundle coordination costs	1.00

Bundle inputs valid? (1=yes)	1.000000

Net bundle benefit	4.000000

Baseline7-2-1=4 lakh. Complementarity is a hypothesis. To estimate an interaction require credible matched outcomes under neither,Aonly,Bonly,andAbothB, with common costs/units/horizon and a causal design. Bundle net benefit alone supplies none of those contrasts.

Gates | Record evidence, not impressions

-1 UNKNOWN;0 NO;1 YES. These synthetic evidence-status controls are NOT derived from the cash-flow model. Actual supporting resource/rival/date/rights evidence has not been provided.

V: comparative value supported?	-1.00
R: not widely held by matched rivals?	-1.00
I: costly imitation AND viable substitutes tested?	-1.00
O: rights, processes and incentives capture value?	-1.00

Status codes valid? (1=yes)	1.000000

Conservative evidence-status conclusion	UNRESOLVED

Ownership alone is not O. Unknown O is not a demonstrated failure; no O means not captured even if V/R/I supported. These are conservative classroom labels for the defined resource/horizon, not empirical company ratings or an automated strategy decision. All-yes is not permanent advantage.

Reported ratio | Preserve denominator scope

Dated company-reported FY26 Transport metrics, crore INR, from16May2026 letter and presentation. Not synthetic cash flows, all-capital returns, current quarter or independent competitive-advantage proof.

Company-reported adjusted EBIT	308.00
Company-reported tangible invested capital	1925.00
Company-reported adjusted EBITDA	561.00
Company-reported tangible depreciation	252.00

Illustration inputs valid? (1=yes)	1.000000

Ratio from stated numerator/denominator	16.0000%
Subtraction of displayed rounded components	309.000000
Displayed bridge minus stated adjusted EBIT	1.000000

308/1925=16%;561-252=309,1crore above displayed308. Presentation warns rounded totals may not correspond; no unrounded reconciliation verified. Keep reported numerator308, do not silently replace it. Capital excludes ROU,cash,intangibles/goodwill; adjusted EBIT reflects rent. Newer annual-report selected text uses different consolidated revenue/EBITDA/PAT figures: do not treat these as a reconciled current all-capital series.

Evidence | Source claims need comparators

Selected written text refreshed13November2026. No full audiovisual/diagram review or independent verification of a company moat. Company statements retain authorship and dates.

OpenStax	https://openstax.org/books/principles-management/pages/8-5-the-internal-environment - distinguish resources and capabilities; organization to capture value. Starbucks yes/no examples are teaching judgments, not current market proof. Dated rideshare facts not adopted.
Oregon State	https://open.oregonstate.education/strategicmanagement2e/chapter/4-vrio-analysis/ - matched rivalry, economically viable substitutes, useful-life horizon and capture. Source17-year patent assertion not adopted. Its ownership shorthand is insufficient without operational capture evidence.
Company letter	https://www.delhivery.com/uploads/2026/04/LetterToShareholders_Q4FY26.pdf - dated16May2026, despite AprilURL. Management network/data/moat claims and forecasts are not independent rarity or causal proof. FAQ10 defines adjusted Transport capital/EBIT; numeric illustration separate from synthetic case.
Same-issuer corroboration	https://www.delhivery.com/uploads/2026/04/EarningsPresentation_Q4FY26.pdf and https://www.delhivery.com/uploads/2026/05/EarningsCallTranscript_Q4FY26.pdf - selected ratio/rounding and call text only. Same issuer is not independent corroboration. No call audio/video or source-wide validation.
Newer annual report	https://www.delhivery.com/uploads/2026/08/Annual_Report_FY26.pdf - selected performance text uses reportedEBITDA6400million/adjusted3093million andPAT1525million versus earlier letter764crore/457crore/153crore. Definitions/restatements not reconciled here; do not merge them or claim latest-quarter coverage.
Actual evidence gate	Define resource/use/location/date/horizon and matched rival set; document alternative uses, imitation/substitutes, allowed data use, staffing/process/incentives and strongest disconfirming evidence. Unknown stays unknown. No confidential competitor records, staff contact, procurement, system testing or investment authorized.

Actual work | No empirical learner or moat verdict

Record only observed work, permission-cleared sources and actual review. Blank is not no, zero, acceptance or mastery.

Actual date/version	Defined resource/rival set V evidence/alternative	R evidence/comparator	I substitutes/horizon	O rights/capture	Reviewer/transfer

Actual work remains blank. Record only what occurred: dates, reasoning, error/source/correction, strongest objection and a new delayed transfer. No invented learner results, sponsor acceptance, actual budget release or signed rights.

Failure log | Authored execution only

Observed native tests are added only after execution. Not actual learner mistakes, independent human audit, Excel/Sheets parity, real authority or overall 10/10.

Controlled test	Observed authored outcome
Baseline units/NPV/status/ratio	PASS:every saved baseline formula independently checked.
Changed economic and timing inputs	PASS:24 changed sets plus restoration.
Replication/discount boundaries	PASS:discount,NPV and horizon boundaries;no perpetuity.
Bundle and gate status isolation	PASS:bundle not interaction;unknown/no/yes capture states.
Invalid operating/timing/horizon inputs	PASS:operating,timing,horizon invalidity isolated.
Invalid bundle/status/ratio inputs	PASS:16 invalid cases;other models remain checked.
Broken critical outputs hold	PASS:6 broken critical references held or errored explicitly.
Restored baseline/actual blank	PASS:restored baseline;actual work blank.

Only the original synthetic course exercise at https://top1os.dev/ supplies the case figures. No new empirical reading, real participants, company records, Indian legal clearance, actual commitments or source completeness claimed.
