D78-D79 | Returns are not an investment mandate

SYNTHETIC private classroom model. Twenty invented IDs, figures, observations and roles. No real company facts, diligence, investment, outreach or fund formation.

Units and assumptions	Crore INR; one initial cheque, fully converted common equity, no preferences/interim proceeds/follow-ons. Year 7 exit is distributable equity after debt/claims. Retention r multiplies initial ownership; it is not percentage-point dilution.
Read the evidence map	Company A/B preserve 20 case IDs, geography, stage, supplied review/defer/exclude labels and unresolved gaps. A passing formula cannot verify climate impact, financing, rights or a buyer. C20 equity basis is unsubstantiated; its numbers are conditional only.
Trace inputs to returns	Capital inputs retain original figures. Returns computes ownership, three scenario proceeds, base gross MOIC, 4x exit threshold and formula gates. No automatic investment choice. Review means conditional diligence, not buy.
Keep bundle and fund apart	Bundle preserves the original five teaching IDs C01-C05, not a reranked portfolio. Every selected row must pass formula gates and still needs evidence. Sum proceeds / sum invested cost, never sum or average company multiples. Budget is separate from this no-follow-on model.
Do not spend the reserves	Lifetime commitment 50 minus fees10 leaves40. Initial earmark20 less selected19 leaves1; proposed follow-ons21 exceed reserve20 by1. Reserves are not cash already called, rights or owner consent. Follow-on ownership and total cost are NOT modeled here.
Impact is not exit cash	Climate uses equal-service annual units, baseline and solution lifecycle factors. Planned avoided emissions remain separate from actual impact, corporate scopes, credits, attribution and equity returns. A lower baseline can reverse the sign.
Transfer, then restore	Change C05 r from .60 to .50; confirm base MOIC3.3333 and formula exclusion without erasing evidence. Raise minimum ownership to .20; inspect exclusions. Change reserve to21 and climate baseline to.45, then restore. Log attempted reasoning and delayed retest; no learner mastery asserted.

Terms | Chosen screens, not market rules

All thresholds are invented case preferences, not legal eligibility, current market benchmarks, investment advice or permissions.

Minimum initial cheque (crore)	2.00
Maximum initial cheque (crore)	5.00
Minimum initial ownership (fraction)	0.10
Minimum base gross deal MOIC	4.00
Exit horizon (years)	7.00
Lifetime fund commitment (crore)	50.00
Lifetime fees / expenses (crore)	10.00
Initial investment earmark (crore)	20.00
Follow-on reserve earmark (crore)	20.00

Terms valid? (1=yes)	1.00

Numerical validity does not prove the earmarks fit the net commitment: Budget tests that separately. Negative returns and negative planned emissions may be meaningful, so the model does not hide them. Geography India and stage seed stay fixed to the original teaching mandate.

Evidence map | C01-C10

All company IDs, sectors, locations, stages and evidence statements are invented. Supplied labels are conditional case judgments, not current company assessments.

ID	Sector	Geography	Stage	Case label	Unresolved evidence / contradiction
C01	industrial heat	India	seed	**review**	Metered operating-energy evidence and embodied-emissions boundary still need independent checking.
C02	cold-chain efficiency	India	seed	**review**	Comparable service-level and refrigerant/leakage evidence remain open.
C03	battery materials reuse	India	seed	**review**	Feedstock rights, recovered-product quality and process energy remain unverified.
C04	low-emission construction material	India	seed	**review**	Durability, functional equivalence, certification and scale-up cost remain open.
C05	farm energy efficiency	India	seed	**review**	Actual adoption, water/rebound effects and sensitivity to dilution remain open.
C06	grid software	India	seed	**exclude**	Initial ownership 1 percent misses fictional 10 percent minimum despite a 5x base payoff.
C07	EV components	India	seed	**exclude**	Base gross multiple 3.2x misses fictional 4x screen after stated dilution.
C08	renewable asset operator	India	growth	**exclude**	Growth stage outside seed-only mandate; headline return cannot waive mandate.
C09	cooling efficiency	outside India	seed	**exclude**	Outside fictional geography mandate, not a claim of poor business quality.
C10	hydrogen equipment	India	seed	**exclude**	Initial ticket 8 exceeds fictional 5 crore cap; cannot silently resize the offered round.

C01-C05 are conditional diligence candidates under supplied assumptions, not cleared investments. C06-C11 fail stated screens; C12-C20 retain unresolved evidence. C20 exit-equity inputs are unsubstantiated. Do not attach real company names or treat role-played approval as authority.

Evidence map | C11-C20

All company IDs, sectors, locations, stages and evidence statements are invented. Supplied labels are conditional case judgments, not current company assessments.

ID	Sector	Geography	Stage	Case label	Unresolved evidence / contradiction
C11	circular packaging	India	seed	**exclude**	Initial ticket 1 below fictional 2 crore minimum.
C12	water monitoring	India	seed	**defer**	Climate mitigation link not established; adaptation/service benefits are separate, not automatically zero.
C13	soil carbon measurement	India	seed	**defer**	Baseline, permanence, leakage and verification unavailable; do not treat estimated carbon as issued credits.
C14	recycling logistics	India	seed	**defer**	Same avoided-tonne claim appears in another value-chain record; aggregation/attribution not resolved.
C15	biomass heat	India	seed	**defer**	Competing feedstock use, supply contract and emissions boundary unresolved.
C16	industrial efficiency sensors	India	seed	**defer**	Letters of interest only, not paid deployment or verified energy savings.
C17	carbon capture equipment	India	seed	**defer**	Energy penalty, storage terms, permanence and full financing plan unresolved.
C18	fleet charging	India	seed	**defer**	Interconnection, utilization and cash-timing evidence missing, no assumed permit approval.
C19	textile reuse	India	seed	**defer**	Imported market-size total not converted into eligible paid units or firm-specific economics.
C20	distributed solar controls	India	seed	**defer**	Exit enterprise headline includes debt; supplied equity proceeds basis needs reconciliation before use.

C01-C05 are conditional diligence candidates under supplied assumptions, not cleared investments. C06-C11 fail stated screens; C12-C20 retain unresolved evidence. C20 exit-equity inputs are unsubstantiated. Do not attach real company names or treat role-played approval as authority.

Capital inputs | Original case ledger

Crore INR. Retention r: fraction of initial ownership retained after future dilution with NO extra fund cash. Down/base/up are scenario equity proceeds, not probabilities. C20 figures conditional only.

ID	Pre-money	Initial cheque	Retention r	Exit downside	Exit base	Exit upside	Inputs valid
C01	20.00	5.00	0.60	50.00	200.00	400.00	1.00
C02	15.00	3.00	0.75	30.00	120.00	240.00	1.00

C14	20.00	5.00	0.60	50.00	200.00	400.00	1.00
C15	20.00	5.00	0.60	50.00	200.00	400.00	1.00
C16	20.00	5.00	0.60	50.00	200.00	400.00	1.00
C17	20.00	5.00	0.60	50.00	200.00	400.00	1.00
C18	20.00	5.00	0.60	50.00	200.00	400.00	1.00
C19	20.00	5.00	0.60	50.00	200.00	400.00	1.00
C20	20.00	5.00	0.60	50.00	200.00	400.00	1.00

Zero retention is allowed: exit ownership/proceeds become zero and the positive-return exit threshold is undefined. Negative net equity is outside this simplified common-equity input model. Input validity is not proof of valuation, ownership rights, liquidation waterfall, cash availability or forecast accuracy.

Returns | Follow the ownership bridge

Crore INR except fractions/multiples. Formula gates do not waive evidence. Fixed geography/stage from the preserved source case; thresholds from Terms. No follow-ons, preferences, fees or taxes modeled here.

ID	Initial ownership	Exit ownership	Down proceeds	Base proceeds	Up proceeds	Base gross MOIC	Required exit for target	Two-flow annualized base	Formula gates pass?	Case label / output
C01	20.00%	12.00%	6.00	24.00	48.00	4.800000	166.666667	25.12%	1.00	REVIEW: evidence open

C20	20.00%	12.00%	6.00	24.00	48.00	4.800000	166.666667	25.12%	1.00	DEFER: evidence open

Column I is only an annualized return for one day-0 cheque and one year-7 receipt (or changed horizon). It is not MOIC/year, general dated cash-flow IRR or net LP return. C20 numerical values remain conditional because equity basis is unsubstantiated. Formula pass is neither permission nor evidence clearance.

Bundle | Preserve the five conditional case IDs

C01-C05 remain the fixed teaching bundle, not an automatically reranked or approved portfolio. All outputs assume no follow-ons; adding investment requires a new holdings/cost/timing model.

Total initial cost	19.00
Downside proceeds	20.65
Base proceeds	87.00
Upside proceeds	174.00
Downside gross bundle MOIC	1.086842
Base gross bundle MOIC	4.578947
Upside gross bundle MOIC	9.157895
Two-flow annualized base	24.28%

Count of five passing formula gates	5.00

Evidence clearance / permission	OPEN: all five have unresolved evidence; no authority to invest. Arithmetic and formula-gate passes do not clear actual diligence.

Baseline cost19; proceeds20.65/87/174; gross multiples1.086842/4.578947/9.157895. These are scenarios, not probability-weighted forecasts, fund net returns or return guarantees. At C05 r=.50, base proceeds85 and MOIC85/19 while that row fails the 4x screen. Do not erase it or silently substitute a new company.

Budget | Earmarks are not cash or ownership

Lifetime teaching fund envelope in crore INR. Follow-on schedule below is proposed only. No capital call, wire, right to follow on or actual commitment is authorized.

C01 proposed future follow-on	4.00
C02 proposed future follow-on	3.00
C03 proposed future follow-on	5.00
C04 proposed future follow-on	4.00
C05 proposed future follow-on	5.00

Proposals valid? (1=yes)	1.00

Commitment less fees/expenses	40.00
Total investment earmarks	40.00
Unallocated / excess versus envelope	0.00
Initial earmark minus fixed bundle	1.00
Proposed follow-ons total	21.00
Reserve earmark minus proposals	-1.00
Total bundle + proposed cash	40.00
Envelope minus total proposed cash	0.00

Baseline total cash19+21=40 happens to equal net envelope40, but the independent reserve earmark20 is still exceeded by1. A spare1 initial earmark is NOT silently transferable. Changing reserve requires an explicit hypothetical reallocation and checking the overall envelope. No follow-on ownership, proceeds or new MOIC is computed. Actual documents and cash timing remain unverified.

Climate | A counterfactual is not a credit

Independent equal-service lifecycle teaching model. All factors, annual units and scenarios are invented. Not measured avoided emissions, Scope netting, issued credits, revenue or investor-specific attribution.

Baseline lifecycle tCO2e / unit	0.80
Solution lifecycle tCO2e / unit	0.50
Hypothetical deployed units / year	10000.00

Inputs valid? (1=yes)	1.00

Planned avoided tCO2e / year	3000.00

Changed baseline tCO2e / unit	**Planned annual avoided tCO2e**
0.80	3000.00
0.55	500.00
0.45	-500.00

Equal functional service, lifecycle boundary (materials/manufacture/distribution/use/disposal), factor geography/year, adoption, dynamic baseline, leakage/rebound and double counting all need evidence. Baseline0.45 versus solution0.50 yields minus500: an increase, not zero savings. Scenario units are not TAM, realized deployment or saleable credits. Do not add this sheet to equity proceeds or deduct from corporate scopes.

Memos | Conditional thesis and a reasoned pass

Authored synthetic worked frames, not actual diligence or approvals. Write your own attempted reasoning and counterevidence separately; do not fabricate quotes, buyers, verified climate performance or sign-offs.

C01 | conditional thesis	Review for diligence only, not an approved invest decision		
Initial / exit ownership	20.00%	12.00%	
Base gross deal MOIC	4.80		Original base proceeds24 on cheque5 give4.8x. This assumes common equity, no follow-ons, retention.60 and exit equity200, not a buyer bid or net LP return.
Required exit for target	166.67		
Strongest contrary evidence	Metered operating-energy and embodied-emissions evidence are unverified. Financing, ownership rights, comparable service and exit buyer/value evidence remain missing.		
What reverses the thesis	Missing critical evidence means defer. Lower retention/exit can fail the formula screen. Target exit166.666667 is algebra, not proof of an achievable sale.		

C07 | pass at stated terms	Do not replace failed economics with sector enthusiasm		
Initial / exit ownership	20.00%	8.00%	
Base gross deal MOIC	3.20		Original case: initial ownership20%, retained40% gives exit ownership8%, proceeds16 and3.2x. Exit equity250 would reach4x at unchanged assumptions, but no evidence supports that price.
Required exit for target	250.00		

What changes the pass?	A supported changed underwriting case could alter the formula result, but climate, rights, cash and actual consent remain separate. Do not claim target250 is a forecast.

Fictional day0 evidence role checks provenance; day30 climate role checks equal-service boundary and contradictions; day60 financing/rights role checks terms, cash and ownership; day90 sponsor role reviews/defer with strongest objection. These role assignments are not actual consent, signatures or capital release.

Failure log | Authored execution, not learner proof

Actual authored test outcomes are filled after native LibreOffice recalculation. No Excel/Sheets parity, independent learner transfer, real diligence or capital approval claimed.

Test / context	Observed authored outcome
Baseline ownership / returns	PASS: all20 ownership/returns/threshold/annualized/gate rows, fixed-bundle ratios, earmarks and climate model independently checked. C20 remains conditional; no evidence or capital clearance.
C05 changed retention	PASS: C05 retention .50 gives3.333333x and formula exclusion. Fixed bundle remains same IDs; base proceeds85, MOIC85/19. Restored.
Changed ownership mandate	PASS: minimum ownership20% independently rescreens every row; return multiples do not waive mandate. Supplied evidence gaps remain. Restored.
Zero retention	PASS: zero retention gives zero exit/proceeds/MOIC, undefined positive-return threshold and exclusion, not divide-by-zero numeric answer. Restored.
Invalid inputs / terms	PASS: zero cheque, retention>1, text/blank/out-of-order scenarios and invalid ownership/horizon/ticket terms suppress return totals. Restored.
Reserve and envelope conflict	PASS: reserve21 covers follow-ons21 but earmarks41 exceed investable40 by1. Negative proposal suppressed. No silent transfer from initial allocation; restored.
Lower climate baseline	PASS: baseline .45 versus solution .50 gives minus500 tCO2e/year, not zero savings. Separate from inventory/credits/equity returns. Restored.
Zero units / invalid factors	PASS: zero deployed units gives zero planned emissions difference; negative/text/blank factors/units invalid, not false savings. Restored.
Broken return reference	PASS: broken return reference propagates into bundle proceeds/MOIC rather than a fake numeric pass. Restored.
Restored baseline	PASS: baseline formulas restored after changed contexts and invalid cases. Authored native execution only, not independent learner transfer or Excel/Sheets parity.

Keep your own attempted reasoning, error/cause, correction and delayed changed-context retest. Source case D78-D79 at https://top1os.dev/ ; same original synthetic assumptions. Existing MIT/ILPA/GHG Protocol/Project Frame readings are framing, not current company, fund-term, legal or empirical validation.
