D 163 | Price, reserves and cash are different

FICTIONAL offline follow-on and board-discussion lab. Crore unless rupees/share, fractions or months labeled. Not actual investment, fair value, board meeting or legal advice.

Round assumptions	250 pre +50 primary =300 post. Existing 10 crore common-equivalent shares, fund 12%; same new-money rights/price, no pool/debt/preferences/tax/fees/secondary. Stipulated exercisable pro-rata right; no real allocation or approval verified.
New cheque economics	Full 6 preserves 12%; partial 3 yields 11%; none 0 yields 10%. At exit 900 full 108 versus none 90: incremental 18/6=3 x, NOT 108/6=18 x. Historical cost unknown; whole-position profit/IRR not computed.
Capital constraint	Fund 8 reserves and alternative 5. Full 6+5=11 exceeds 8; partial 3+5=8 fits. Feasible does not mean optimal or approved. Company 50 primary is not fund cash and must not be used to finance the fund cheque.
Operating cash	Current unrestricted 4 / constant net burn.4 =>10 months; downside.6=>6.666667. Separate full-close company 54 cash scenarios 135/90 months unrealistically hold burn fixed and exclude deployment; not a funding forecast or cash already received.
Private decision	Compare full/partial/none with new underwriting, opportunity cost, concentration, mandate and actual rights. No automatic full-follow-on from markup, outside lead, signaling or sunk historical cost. No probabilities supplied, so no expected-value winner.
Unknown actuals	Actual company, fund, documents, data date, class rights, decision owner, reviewer and permission blank. No capital call, trade, investor update, board notice, invitation, minutes, signature, account or spend.

Round inputs | A classroom right, not entitlement

Shaded fictional inputs. Changing assumptions changes arithmetic, not actual rights or recommendation.

Pre-money crore	250.00
Total new primary crore	50.00
Existing common-equivalent shares crore	10.00
Existing fund fraction	0.12
Partial take-up fraction of full cheque	0.50
Available fund reserves crore	8.00
Separate alternative cheque crore	5.00
User exit distributable equity cash crore	900.00

Numeric/domain gate (1=yes)	1.000000

Pre, primary and old shares strictly positive; fractions 0..1; reserves/alternative/exit nonnegative. No pool, rights, differential class, fees, tax, secondary or share-count changes beyond new primary. Round size stays fixed: other investors replace any unused allocation.

Round | Shares reconcile before percentages

Same common-equivalent price for all new money; crore/crore yields rupees per share.

Post-money crore	300.000000
New share price rupees	25.000000
New shares crore	2.000000
Post-round shares crore	12.000000
Existing fund shares crore	1.200000
Full pro-rata cheque crore	6.000000
Partial cheque crore	3.000000
None post fraction	0.100000
Full post fraction	0.120000
Partial post fraction	0.110000

Baseline 300 post, 25 price, 2 new shares, 12 total, 1.2 old fund shares; full 6/partial 3. Fractions.12/.11/.10 full/partial/none. .12*50 assumes pro-rata right, allocation and same price, not universal legal entitlement.

Exit sensitivity | Incremental is not whole position

Gross equity proceeds, no historical cost, timing, tax, fees or preferences. Static 100/300/900 and user exit row. Crore except multiples.

Exit	None proceeds	Partial proceeds	Full proceeds	Partial increment	Full increment	Partial multiple	Full multiple
100	10.000000	11.000000	12.000000	1.000000	2.000000	0.333333	0.333333
300	30.000000	33.000000	36.000000	3.000000	6.000000	1.000000	1.000000
900	90.000000	99.000000	108.000000	9.000000	18.000000	3.000000	3.000000
900.000000	90.000000	99.000000	108.000000	9.000000	18.000000	3.000000	3.000000

At 900 full 108/none 90: increment 18/full cheque 6=3 x. At 100 increment 2/6=1/3 x; at 300=1 x. Full proceeds divided only by new cheque is wrong whole-position attribution. Zero cheque makes incremental multiple undefined, not zero or infinite. No probability-weighted recommendation or IRR.

Reserves | Budget fit is not an investment decision

Fund reserves distinct from company new primary. Negative residual is visible; feasibility flag means arithmetic only.

Choice	Cheque	After cheque	Alternative	Total uses	After both	Fits both 1/0
None	0.000000	8.000000	5.000000	5.000000	3.000000	1.000000
Partial	3.000000	5.000000	5.000000	8.000000	0.000000	1.000000
Full	6.000000	2.000000	5.000000	11.000000	-3.000000	0.000000

Baseline none/partial/full remaining after cheque 8/5/2. Including alternative 5: remaining 3/0/-3; fits 1/1/0. Alternative value/probability/timing unknown. No optimizer, automatic allocation, funding facility or spending authority. Actual mandate/concentration/uncalled commitments/expenses need evidence.

Cash inputs | Company cash is not fund reserves

Shaded fictional inputs. Changing assumptions changes arithmetic, not actual rights or recommendation.

Current unrestricted company cash crore	4.00
Base constant net burn crore/month	0.40
Downside constant net burn crore/month	0.60

Numeric/domain gate (1=yes)	1.000000

Positive burns required; zero burn does not get infinite runway. Current cash 0 permitted. Downside is just a label; changed values need interpretation. No collections, working capital, restricted cash, runway date data, financing probability or actual net cash flow verified.

Runway | No financing versus hypothetical close

Current/no-funding scenarios first. Full-close arithmetic separately assumes company receives ALL primary unchanged.

Current base runway months	10.000000
Current downside runway months	6.666667
Base minus downside months	3.333333
Company cash IF full primary closes crore	54.000000
After-close base months, burn held fixed	135.000000
After-close downside months, burn held fixed	90.000000

Baseline 10/6.666667 months current. Hypothetical 54 cash yields 135/90 months only with unchanged burn, no deployment, fees or timing. Not realistic forecast, funding received or reason to invest. NRR 95% means 5% cohort decline over specified period, not necessarily monthly or total ARR decline.

Decision | A conditional one-pager, kept private

Complete this independently before reference. No actual investment owner or accepted decision supplied.

Updated thesis	Compare new evidence against original assumptions. ARR 2.2 crore, 8% monthly growth versus 15%, NRR 95%, 10 month runway are stipulated, not verified. Need dated cohort period, retention, margins, pipeline, concentration and collection facts.
Full case	6 preserves 12%, leaves 2 before alternative. At 900 increment 18/6=3 x; at 100=1/3 x. Full+5 does not fit 8. Show conditions that justify concentration and opportunity cost; ownership preservation is not return proof.
Partial case	3 plus alternative 5 fits 8, post 11%. Same incremental multiple per new rupee under this price. Not automatically best: alternative economics, mandate, execution, rights and financing risks unknown.
None case	0 new cash keeps 8 reserves, post 10%. Opportunity cost may justify passing; negative signaling not proof company bad. Retained stake still exposed. Do not conceal facts or invent fund constraints.
Reversal conditions	Change pre/round size/rights/exit/available cash/alternative or burn. Recompute, then name which evidence and owner would change decision. No invented probabilities or recommendation from three unweighted exits.
Decision gate	Actual owner, reviewer, documents, authority and next checkpoint blank. Draft only, not IC approval, LP update, allocation notice, trade, capital call, account or spend.

Board and value | Discussion is not consent

Private outlines and measurement-date evidence, not a sent board pack, official minutes or valuation opinion.

Slide 1 metrics	Metrics against plan with unchanged definitions and dated cohorts. Explain ARR growth versus NRR, slower growth, retention, margins and collections. Do not use selective positive facts or promise future performance.
Slide 2 cash	Current base/downside cash and financing milestones. Distinguish committed, conditional and received funding; company cash versus fund reserves. Constant burn months are not weekly cash flow forecast.
Slide 3 asks	Options, tradeoffs, decision owner, conflicts and evidence gaps. Appropriate closed-sessions/attendance depend on documents and law. No invitation, actual vote, minutes, consent or observer entitlement inferred.
Recent round	IPEV 3.10: recent price calibrates inputs, not standalone technique or default markup. Rights/classes, transaction orderliness, strategy, measurement-date performance and market changes matter. Toy common-equivalent price is not actual fair value.
Offers and timing	IPEV 5.8: indicative offers can support valuation but usually insufficient alone; weight may rise closer to execution after uncertainty assessment. A later close can inform conditions known/knowable at date, not automatically import later new conditions. No every unsigned quote or only closed round rule.
Source judgment	Kellogg first three-slides/48 hour pre read remain recording-specific practices, not duties; not newly heard here. CRV July 2026 US/Delaware board patterns/percentages and firm claims not validated India law or universal rule. Fair information for authorized directors; no concealment.

Actual evidence | No real investment or board action

Blank means unknown. No rights, allocation, fund mandate, company data, decision, valuation or permission established.

Case / date	Terms / rights	Cash / data date	Fund limits	Decision owner	Reviewer / permission	Next safe check

No case facts, real cheque, capital call, wire, valuation mark, share upload, IC vote, board notice, LP message, signature, account, calendar or spend. This authored private arithmetic does not establish law/accounting/native Excel/Sheets/independent learner/field/source AV or overall 10.

Evidence | Primary guidance is not case clearance

Six URLs/six publishers: primary valuation guidance, practitioner finance/governance, vendor article and product homepage. Not six independent effectiveness studies.

1752 and CRV	Complete returned written 1752 follow-on and CRV July 2026 board article read. Pro-rata rights documents/price/reserves reasoning used, not 2026 market statistics or claimed causality. CRV Delaware patterns, control transition percentages, exit study and firm stories not independently validated.
Visible homepage	Complete returned written homepage read: AI portfolio-monitoring/investor updates/fundraising marketing. Not UI, pricing, security, performance, entitlement, actual reporting, upload or signup. No mandatory product workflow.
Carta follow-on	Complete returned Sept 2025 article/current page read. Pro-rata right not obligation and fund opportunity cost useful. Senior preference does not guarantee recovery; pay-to-play/anti-dilution document dependent. New shares not universal: secondary does not issue. Capital call/reporting/accounting instructions not executed.
IPEV primary	Public 92 page December 2025 PDF recovered, selected pages 5, 8, 17-18, 38-41, 59-60 read in addition to truncated fetch through 3.2. Selected source pixels checked, not full 92 pages/law/accounting adoption. Effective quarterly periods beginning 1 Apr 2026 subject to applicable law/accounting.
Lincoln Jan 2026	Complete returned Q&A read. Useful calibration/complexity discussion, not independent standard. Its blanket post-date event summary qualified against primary 18/60: later transactions may evidence conditions known/knowable at measurement date.
Remaining limits	No actual law/accounting policy, valuation reviewer, rights/case, platform account/learner, full recording/chart coverage or native Excel/Sheets parity. All actuals blank. Tests are authored conditional arithmetic, not investment performance/consent/overall 10.
