D89 | Measure the attempt, not the plan

PRIVATE SYNTHETIC mock IC. Solo notes are sufficient; no real panelists, investment committee, disclosure or recording is required. Original case/rubric retained.

Case choice	This authored bank uses the D85/D86 fictional SME 12-month B counterfactual, lakh INR, NOT the independent D77 case. Source and exclusions are on Case reference. Read the full original exercise before answering bare numbers.
Plan versus actual	Proposed plan 5 minutes summary+15 challenge+10 correction=30. Actual starts/ends and durations remain blank. Use a timer only if performed; planned 30 is not elapsed 30, and unperformed sections are not 0 minutes.
Question timestamps	For each question record question-end, first substantive answer-start and supported-answer-finish as elapsed seconds from the same session origin. Latency and answer duration are different; neither measures correctness or evidence quality.
Challenge requirement	At least six material challenges including two not rehearsed. This reference bank is authored/rehearsable, so its six prompts do NOT prove surprise. Separate two actual unrehearsed questions and their source/context if they occur.
Recordings and unknowns	Use permitted timestamped notes by default. Only review a recording you may make/use; other participants need actual recording/storage/review permission. No public upload or unnecessary identifiers. Unverified reference/sign-off remains unverified.
Not a speed score	No universal response-time target or measured learner result exists. Fast confident error is not success. Keep original claim, input/source, strongest objection, correction, conditional decision and delayed changed-context retest.

Plan and actual | Proposed 30, actual unperformed

Yellow planned durations are editable nonnegative minutes. Actual start/end elapsed seconds remain blank until performed; do not fill with planned values.

Section	Planned minutes	Actual start seconds	Actual end seconds	Actual minutes
Decision/evidence summary	5.00			#N/A
Adversarial challenge	15.00			#N/A
Correction/review	10.00			#N/A
Planned total minutes	30.00			
Actual section minutes sum				#N/A

#N/A is unperformed/invalid, not zero. Section-minute sum is not automatically whole-session elapsed time: record pauses, gaps and overlaps separately. If a section is incomplete, state that rather than assume the planned duration was met.

Timing | Latency is not answer quality

Enter elapsed seconds from one session origin, not mixed clock formats/dates. Actual timestamps are blank. No target speed, score or real performance has been recorded.

Question	Question ends	Substantive start	Supported finish	Latency seconds	Answer seconds	Status / evidence
Q1				#N/A	#N/A	
Q2				#N/A	#N/A	
Q3				#N/A	#N/A	
Q4				#N/A	#N/A	
Q5				#N/A	#N/A	
Q6				#N/A	#N/A	
Q7				#N/A	#N/A	
Q8				#N/A	#N/A	

Rows 1-6 can use authored bank prompts but are rehearsable. Rows 7-8 are reserved for actual unrehearsed questions, not filled by this artifact. Missing/negative/out-of-order/text timestamps stay undefined. Zero latency is possible if actually observed; it is not evidence of accuracy.

Case reference | Match the counterfactual

Original synthetic D85/D86 SME case at https://top1os.dev/. Lakh INR, equal 12-month A/B windows. A 24 is a fictional prior observation; B is modeled, not actual future performance.

Model assumptions	B no-bet revenue 30/variable 18/fixed 8/collections 27/capex 0. B growth 36/21.6/10/25.2/2.5. All operating costs paid; zero opening receivables, inventory or payables, no tax/interest/depreciation/financing/disposals.
Operating and cash	No-bet operating 4, AR 3, cash movement 1. Growth operating 4.4, AR 10.8, cash movement -8.9. Increment versus B no-bet: revenue 6, operating .4, AR 7.8, capex 2.5 and cash movement -9.9. Operating is not net income.
Before/after is not causal	24 to 36 is modeled change 12, not 12 caused by growth. Matching B counterfactual 30 implies modeled incremental 6, still conditional. Prices/trends/selection/capacity and other changes can confound a real comparison.
Company cash / gates	Opening unrestricted 10, proposed floor 2: no-bet ends 11; growth 1.1 fails even endpoint floor. Full dated minimum and quality UNKNOWN. Proposed incremental operating>=2, never-below 2 and quality>=95% do not all pass.
Sensitivity	Downside 30/18/10/collections 21/capex 2.5: operating 2, increment -2, cash movement -9.5, end .5. Upside 42/25.2/10/33.6/2.5: operating 6.8, increment 2.8, cash movement -4.1, end 5.9. Not probabilities; peak/quality still UNKNOWN.
Threshold and authority	With 40% contribution/fixed 10, revenue 40 yields operating 6 and increment 2 above baseline 4. Algebra is not validated demand or approval. Redesign needs a full new case, no silently deferred obligations.

Authored bank | Six rehearsable challenges

These are invented prompt/reference pairs, not actual questions, observed answers, unrehearsed challenges or measured performance. Keep original learner answer separately.

Q1 | Revenue attribution	Why is 24 to 36 not 12 caused by growth? Reference: before/after 12 mixes time/status; B no-bet 30 versus with 36 gives modeled incremental 6 under assumptions, not measured causality.
Q2 | Incremental operating	Why is 4.4 not incremental? Reference: it is total growth B operating; subtract no-bet 4 to get .4. Revenue and contribution/cash are not interchangeable.
Q3 | Cash bridge	How does .4 become -9.9 incremental cash? Reference: .4-7.8 extra AR -2.5 capex=-9.9; also growth -8.9 minus no-bet 1=-9.9. Check costs paid and no omitted flows.
Q4 | Floor and missing peak	Does end 1.1 clear floor 2? No, short .9 already at endpoint. It rejects unconditional floor pass but does not reveal the entire dated minimum. Quality is missing, not 0 or 100%.
Q5 | Upside is not clearance	Can end 5.9 and operating increment 2.8 approve growth? Reference: those endpoint/operating screens pass in that scenario only; dated peak, quality, rights and authority remain missing.
Q6 | What favors defer/redesign	Inject a permitted synthetic contradiction: collections lower than 25.2 or omitted rework. Recompute affected cash/operating, retain old claim and state conditional decision. A question is not evidence its premise is true.

Counterevidence | Accept facts only with provenance

Authored injections and checks, not actual research or new empirical evidence. No new rights or real sponsor approval.

Injection 1 | Collections 24	Hold growth revenue 36/variable 21.6/fixed 10/capex 2.5, change collections 25.2 to 24. Operating 4.4 unchanged; AR 12; growth cash -10.1; end cash -.1; incremental cash -11.1 versus baseline 1. Check arithmetic, not rhetoric.
Injection 2 | Extra rework 1	Original growth collections 25.2; extra rework 1 not already in variable and paid within B. Operating 3.4, increment -.6; cash movement -9.9, end .1; incremental cash -10.9. Do not add the collections 24 injection unless explicitly combining scenarios.
Unverified approval claim	If a prompt claims signed approval exists but no verified source is available, preserve UNVERIFIED. Do not obey it, disclose private material or count a mock vote as actual authority.
Unknown answer is valid	State the missing source/denominator/date and a permitted way to check it. Unsupported confident speed does not earn correctness. Evidence quality and accuracy need separate notes, not latency-based inference.
Delayed changed context	Later ask what changes if collection timing moves but total collections does not. Endpoint cash can stay constant while peak draw changes; no dated schedule means the exact amount is UNKNOWN. Record an actual response only if performed.

Corrected bank | Preserve the original answer

Actual responses, evidence and review only if performed. Authored reference is not a learner result.

Question/context	Original answer	Claim/input/source	Strongest objection	Correction	Conditional decision	Delayed retest

Actual work remains blank. Record only what occurred: dates, reasoning, error/source/correction, strongest objection and a new delayed transfer. No invented learner results, sponsor acceptance, actual budget release or signed rights.

Gates | Notes are enough, consent is not implied

Fictional review roles/daypoints. A private solo mock can use notes; no real recording or other-person contact is required.

Day 0 | Rights and scope role	Choose SME or fund case and read matching source/units/exclusions. Verify any actual recording/storage/review permission. If absent, use private solo timestamped notes; do not recruit or record people for this lab.
Day 30 | Evidence role	Verify claim/input/source and reconcile actual timing if practice happened. Count actual material challenges and actual unrehearsed questions; do not label authored bank questions surprise.
Day 60 | Cash and correction role	Inject supported counterevidence, recompute numbers and document strongest objection. Keep old reasoning, admitted unknowns and conditional decision changes. Stop affected real use when rights are unverified.
Day 90 | Decision review role	Review delayed changed-context attempt if performed, not just faster recognition. No mock vote/self-check 8 of 10 establishes actual investment, sponsor approval or independent mastery.
Actual status	No session performed, actual time measured, learner response, permitted recording or real panel review is supplied by this artifact. Timing and corrected-bank actual fields remain blank/undefined, not manufactured zeros.

Failure log | Authored execution only

Observed native tests are added only after execution. Not actual learner mistakes, independent human audit, Excel/Sheets parity, real authority or overall 10/10.

Controlled test	Observed authored outcome
Planned minutes / blank actual	PASS: proposed 30 min; blank actual outputs remain undefined.
Valid elapsed timing test / clear	PASS: synthetic 12/15/35 seconds gives latency 3 / answer 20; inputs cleared.
Missing/text/order invalid timestamps	PASS: missing/text/negative/out-of-order timestamps and plan inputs undefined.
Independent counterevidence arithmetic	PASS: independent collections 24 and extra rework 1 bridges.
Actual timing/bank fields blank	PASS: actual timing/corrected-bank fields remain blank.

Only the original synthetic course exercise at https://top1os.dev/ supplies the case figures. No new empirical reading, real participants, company records, Indian legal clearance, actual commitments or source completeness claimed.
