New evidence weakens the launch case

Defer or redesign the growth bet.

Do not treat negative modeled cash as an approved loan.

-4.1 lakh

Ending cash after delay + rework

Original growth already failed the floor: cash 1.1 vs floor 2.

Delay + rework reduces incremental operating to -0.8 and incremental cash to -15.1.

No event dates, quality evidence, financing permission or real company records exist.

Four cases, one unchanged counterfactual

Lakh rupees	No bet	Original growth	Delayed 4	Delay + rework
Revenue	30.0	36.0	36.0	36.0
Operating before dep.	4.0	4.4	4.4	3.2
Collections in B	27.0	25.2	21.2	21.2
Cash movement	1.0	-8.9	-12.9	-14.1
Ending cash	11.0	1.1	-2.9	-4.1
Incremental cash vs no bet	0.0	-9.9	-13.9	-15.1

Revenue stays 36 in every growth case. Delay changes cash and receivables, not revenue recognition.

Synthetic D85/86/D88/D90 case. INR lakh; twelve-month B. Not a real board decision.

Two changes, two different accounting paths

Change	Unchanged	What moves
4 collected in B+1, not B	Revenue 36; operating 4.4; NI 2.4	Collections 25.2 -> 21.2; AR 10.8 -> 14.8. Ending cash: -2.9
1.2 separate rework paid in B	Revenue 36; AR 14.8; capex 2.5	Operating 4.4 -> 3.2; NI 2.4 -> 1.2; cash -2.9 -> -4.1

Do not count the delayed 4 twice as a revenue loss and cash delay.

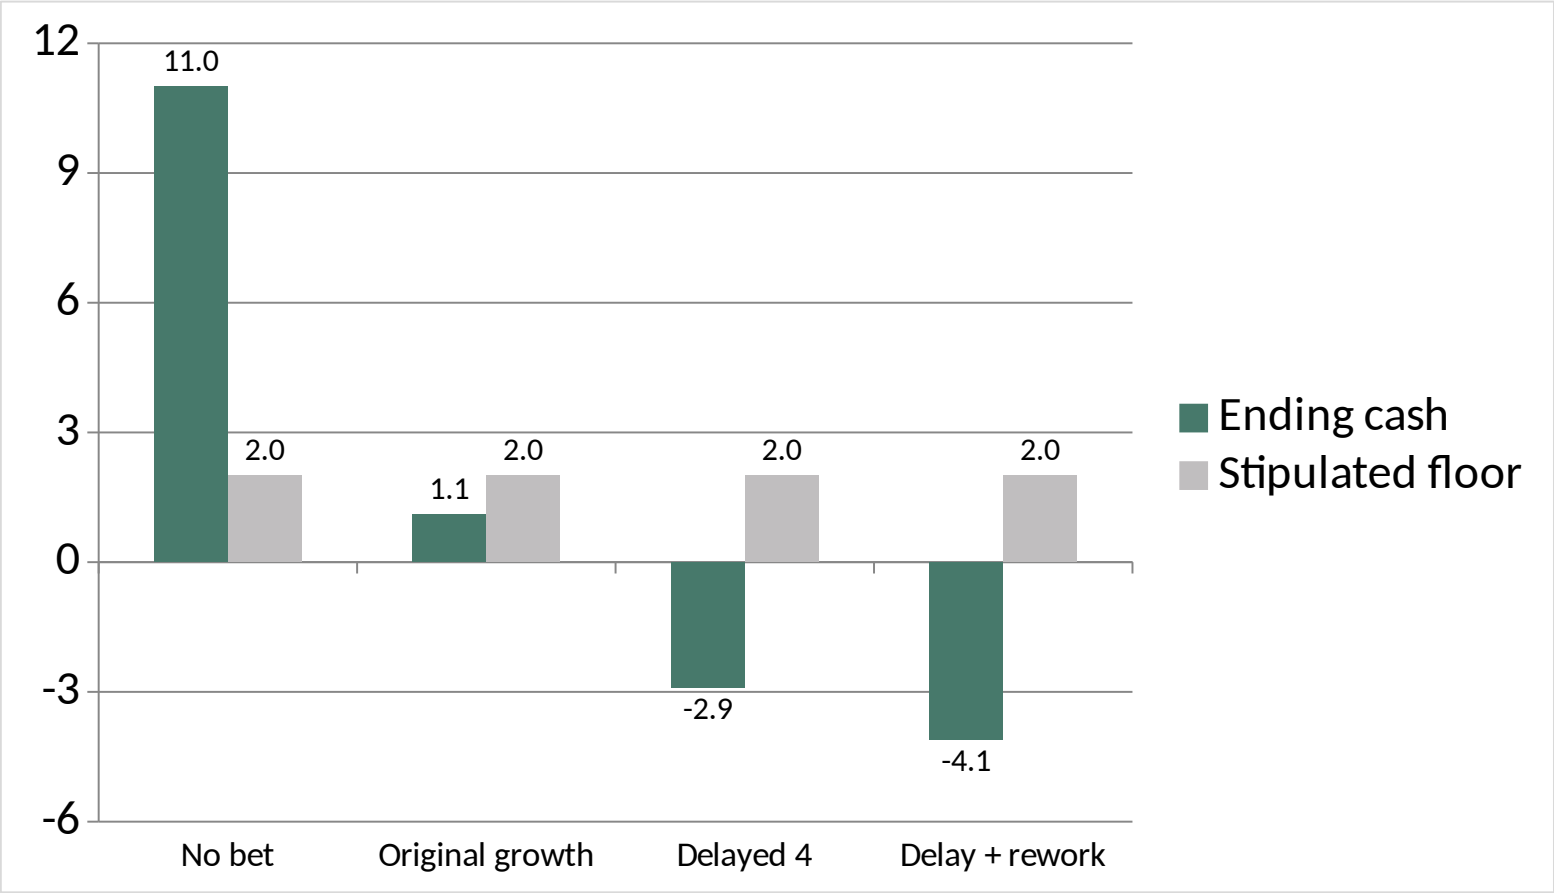

Do not count the 1.2 rework inside costs that already exclude it.

The statements still balance. The plan still fails.

Lakh rupees	No bet	Original growth	Delayed 4	Delay + rework
Net income	2.0	2.4	2.4	1.2
AR at end	3.0	10.8	14.8	14.8
CFO	1.0	-6.4	-10.4	-11.6
CFI	0.0	-2.5	-2.5	-2.5
Closing PPE	18.0	20.5	20.5	20.5
Assets = equity	32.0	32.4	32.4	31.2

CFO = NI + depreciation - AR increase. Assets = cash + AR + PPE. Equity = opening 30 + NI.

Ending cash is not the minimum cash during B

Floor gaps at endpoint

Original: 0.9

Delayed: 4.9

Delay + rework: 6.1

These are not peak-funding estimates. Cash-event dates are absent.

Evidence that could change the decision

Gap	Evidence needed	Stop or reversal rule
Demand / collections	Dated invoices, settlement schedule, counterparty support	Stop if collection timing or recognition cannot be reconciled
Cost / quality	Separate rework scope, paid timing and quality measurement	No pass while quality >=95% is unmeasured
Cash / funding	Dated cash ledger and coherent redesign model	No unfunded floor breach; B+1 receipts are not B funding
Rights / authority	Verified rights, confidentiality and actual approvals	No real sharing, financing, hiring or spend without authority

A sponsor narrative does not replace evidence, solvency or permission.

A 90-day register, not a twelve-month forecast

Gap / fictional owner	Day 0	Day 30 / dependency	Day 60 / Day 90
Demand / case analyst	Log claim + source/status	Reconcile revenue/collections; needs dated evidence	Recheck demand; retain defer if unsupported
Cash / model reviewer	Freeze inputs/formulas	Build dated cash; depends on receipts/costs	Stress model; revisit if unfunded floor breach
Cost + quality / ops reviewer	Separate rework 1.2	Request measured quality + paid dates	Test correction; no quality pass if unknown
Rights + decision / permission reviewer	Record no actual authority	Verify rights before any real sharing/action	Log old/new view; stop absent approval

Review days are simulated checkpoints. They are not actual calendar bookings or assigned people.

Keep the old view and the strongest objection

Stage	Conditional view	What changed / what did not
Original growth	Do not give unconditional pass	Operating uplift +0.4 below target 2; cash 1.1 below floor 2
Collection delay	Defer/redesign becomes more urgent	Revenue and operating stay; cash -2.9 and AR 14.8
Delay + rework	No launch under these no-financing assumptions	Operating uplift -0.8; cash -4.1; quality still unknown

Strongest objection: the delay may be temporary and growth may be valuable.

Response: model the timing, quality and funded redesign. Do not erase a modeled cash gap with future receipts or optimism.

Rehearse without inventing elapsed time

Suggested solo practice

1. Choose a timer limit before starting.
2. Explain slides 1-5 without reading them.
3. Leave a separate challenge round.
4. Log actual start/end and the objection.
5. Update the decision trail after review.

Not performed in this authored example

No elapsed time, spoken delivery, learner response, panel review or recording review is claimed.

Use notes unless you have permission to record/store/review participants.

A clear deck supports a defence. It cannot establish independent learner transfer or full audiovisual quality.

Sources, formulas and boundaries

Case provenance

Synthetic Top1 D85/86 + D88 opening ledger + D90 delay/rework packet. Numeric results are an authored worked example, not observed company facts.
