D84 | Fresh transfer without invented diagnosis

SYNTHETIC private practice. Original case/rubric retained. Separate SME cash, climate and common-equity deal. No real company, spending, disclosure, borrowing, approval or learner outcomes.

Attempt before checking	Solve original D84 without notes, then open worked formulas. Attempts sheet is deliberately blank. Record actual reasoning, error/cause/correction, strongest counterevidence and actual attempt date. No question-level weakness score is invented.
One SME basis	90 days, lakh INR. Zero opening working capital/inventory/payables/tax/financing; stated costs paid. Existing operating 2/AR 2/movement 0. Growth operating 4/AR 6/movement-4; increment operating 2/AR 4/capex 2.
Timing versus endpoint	Opening 7 gives original company cash 5/1/0/3; minimum 0 fails floor 2 despite ending 3. Extra rework 1 at day 60 is outside variable 18: revised operating 3/increment 1, end 2/minimum-1. A negative balance is a funding gap, not authorized borrowing.
Keep independent cases separate	Equal-service emissions (.70-.55)*2000=300 planned tCO2e/year; changed baseline .50 yields-100. Common-equity cheque 2/pre 18/retention .60/exit 100 yields 10% entry/6% exit/3x gross MOIC. Neither is company cash above.
Retain missing evidence	Quality 22/25=88% fails 95%. Sample not population proof. Climate factors need matching lifecycle boundary/significant effects/uncertainty. A 4x deal needs equity 133.333333 conditionally, not evidence that exit is likely. Follow-on requires a new model.
Pick two from actual mistakes	Record only errors actually observed. If sparse/no errors, label choices provisional; confidence, day score and an 8/10 self-check are not independent mastery. Transfers sheet has two changed-context prompts; no delay or learner completion claimed.
Owners and stop gates	Use fictional evidence/cash/quality/rights roles at day 0/30/60/90. Stop unsupported funding/quality/rights claims; no real commitments. Failure log is authored native execution only, not your attempts or independent review.

Inputs | Financial case and explicit rework

Yellow cells editable. Monetary inputs are lakh INR over 90 days. Proposed gates are case assumptions, not real permission.

Existing revenue	20.00
Existing variable costs	12.00
Existing avoidable fixed costs	6.00
Existing collections	18.00
Existing capex	0.00
Growth TOTAL revenue	30.00
Growth TOTAL variable costs	18.00
Growth TOTAL avoidable fixed costs	8.00
Growth TOTAL collections	24.00
Growth TOTAL capex	2.00
Opening unrestricted company cash	7.00
Proposed company cash floor	2.00
Extra rework outside variable costs	1.00
Rework checkpoint day (0/30/60/90)	60.00
Eligible growth deliveries	25.00
On-time growth deliveries	22.00
Proposed on-time fraction	0.95
Proposed operating increment target	2.00

Inputs structurally valid? (1=yes)	1.00

Zero denominator is structurally valid, but quality stays undefined. Rework day must match a modeled checkpoint. Growth ledger totals must reconcile before any funding-gate conclusion. A valid number is not verified evidence.

Bridges | Original and revised, totals and increments

90-day lakh INR. Operating is before depreciation/interest/tax, not net income. Rework is added once, outside original variable costs.

Measure	Existing	Growth original	Growth revised	Increment original	Increment revised
Revenue	20.00	30.00	30.00	10.00	10.00
Variable plus extra rework	12.00	18.00	19.00	6.00	7.00
Avoidable fixed	6.00	8.00	8.00	2.00	2.00
Operating remainder	2.00	4.00	3.00	2.00	1.00
Collections	18.00	24.00	24.00	6.00	6.00
Receivables	2.00	6.00	6.00	4.00	4.00
New capex	0.00	2.00	2.00	2.00	2.00
Project cash movement	0.00	-4.00	-5.00	-4.00	-5.00
Cash via operating/AR/capex	0.00	-4.00	-5.00	-4.00	-5.00
Bridge residual	0.00	0.00	0.00	0.00	0.00

Original operating 4 is only incremental 2; extraAR 4 and capex 2 consume cash, movement-4. Extra rework 1 gives revised operating 3/increment 1/movement-5. Existing movement 0 makes incremental and growth movement equal only in this case. Preserve the same counterfactual.

Ledger | Rework changes more than the endpoint

Only simultaneous net events at stated checkpoints. Unlisted obligations/intraday ordering unknown. Editable original events reconcile to financial inputs.

Day	Collections	Variable	Fixed	Capex	Extra rework	Original company	Revised company
0	0.00	0.00	0.00	2.00	0.00	5.00	5.00
30	4.00	6.00	2.00	0.00	0.00	1.00	1.00
60	8.00	6.00	3.00	0.00	1.00	0.00	-1.00
90	12.00	6.00	3.00	0.00	0.00	3.00	2.00
Totals	24.00	18.00	8.00	2.00	1.00		
Events valid?	1.00						
Reconciled?	1.00						

Minimum company cash	0.00	-1.00
Maximum reduction from opening	7.00	8.00
Ending company cash	3.00	2.00
Project cash movement	-4.00	-5.00

Original opening 7 ->5/1/0/3; revised extra 1 at day 60 ->5/1/-1/2. Original/revised minimum 0/-1 fails proposedfloor 2 although original/revised ending 3/2 meets it. Maximum reductions 7/8 differ from project endpoint movements-4/-5.

Gates | Numbers cannot approve the plan

1=passes this numeric screen only;0=fails;#N/A=undefined/invalid/unreconciled. Real permissions and evidence remain outside formulas.

Screen	Growth original	Growth revised
Operating increment target met?	1.00	0.00
Dated minimum company cash	0.00	-1.00
Minimum >= proposed floor?	0.00	0.00
Ending company cash	3.00	2.00
Ending >= floor? (not funding proof)	1.00	1.00
On-time / eligible	88.00%	88.00%
Quality target met?	0.00	0.00
All known numeric gates pass?	0.00	0.00

Do not adopt unconditional growth on supplied gates. Revised increment 1 misses proposed 2, cash minimum-1 misses 2 and quality 22/25=88% misses 95%. Zero eligible deliveries leaves quality undefined; no automatic all-pass. Redesign/defer needs a coherent funded/quality case and actual rights.

Climate | Planned counterfactual, not inventory

Independent equal-service synthetic case. tCO2e per unit and annual units. Matching lifecycle/service boundary, significant effects and uncertainty must be supported before actual use.

Original baseline tCO2e per equal-service unit	0.70
Solution tCO2e per equal-service unit	0.55
Annual units	2000.00
Changed baseline tCO2e per unit	0.50

Climate inputs valid? (1=yes)	1.00

Original planned tCO2e/year	300.00
Changed planned tCO2e/year	-100.00
Difference from original	-400.00

300 planned tCO2e/year reverses to-100 when baseline changes .70->.50, holding solution .55/units 2000 fixed. Negative planned effects are not truncated to zero. These are not realized savings, issued credits, revenue or corporate-scope deductions, and cannot offset the SME cash gap.

Deal | One common-equity deal, gross return

Independent synthetic deal, lakh INR. No interim distributions, new preferences, follow-on or fees; common pro-rata payout. Distributable exit EQUITY is not enterprise value.

Initial cheque	2.00
Pre-money equity valuation	18.00
Retained fraction of entry ownership	0.60
Distributable exit equity	100.00
Proposed gross deal MOIC target	4.00

Deal inputs valid? (1=yes)	1.00

Entry ownership	10.00%
Exit ownership	6.00%
Gross exit cash	6.00
Gross deal MOIC	3.00
Equity needed for target MOIC	133.33

Cheque 2/(pre 18+2)=10% entry; retained .60 gives 6% exit; equity 100 yieldscash 6/2=3x gross MOIC;4x requires 133.333333 equity. Extra 1 follow-on needs new ownership AND total-cost model; do not keep denominator 2. No fund net-LP return, real valuation, forecast exit or investment approval follows.

Attempts | Blank by design

No actual learner attempts, errors, delay, mastery or weak-skill profile were observed here. Fill only after doing the work. Authored test results live separately in Failure log.

Actual date / case	Attempted answer / reasoning	Observed error / cause	Correction / evidence	Strongest counterevidence	Delayed prompt / actual retest

Pick two remediation areas only after reading actual errors. If sparse/no errors, label provisional. Record original and revised reasoning; an app day score, confidence or 8/10 self-check is not question-level diagnosis or independent mastery. Choose a future date yourself and log actual delayed attempt only when done.

Fictional review register: evidence role/day 0 records provenance and strongest objection; cash role/day 30 checks full dated funding; quality role/day 60 checks denominator and changed context; rights role/day 90 stops any real borrowing/spending/disclosure without actual authority. No commitment created.

Transfers | Changed context, not repeated answers

Use these as future closed-notes prompts after a delay you actually record. This workbook does not claim a delayed retest occurred.

Prompt A | Timing versus volume

Restore original financial inputs. Keep extra rework 1, move its payment from day 60 to 30. Separately test opening cash 10, then restore 7. Reconcile original/revised operating, cash minimum/end, floor and quality. State what changed and what did not. Do not quietly delay a supplier obligation.

Prompt B | Baseline versus ownership

Keep units 2000/solution .55. Test baseline .50 versus .70 without clamping a negative result. Separately reduce deal retained fraction .60->.50 at cheque 2/pre 18/equity 100. Recompute ownership/cash/MOIC/equity for 4x. Explain why neither climate effect nor gross MOIC funds SME obligations.

Keep the strongest objection

Ending cash 2 can equal floor 2 while dated minimum-1 fails. Larger sales/positive planned climate effects/a 3x gross deal return do not repair the failed cash/quality case. Record what supported evidence would reverse each conclusion.

Follow-on is a new model

An additional cheque 1 is not a valid plug into the original 2 denominator. State missing new-round price, dilution, preference, ownership and total investment basis. Do not invent these facts or claim new investment clearance.

No correct-answer timer, automatic weak-skill classifier, participant testing or independent assessor added. Use the original D84 rubric, preserve mandatory provenance/downside/owner-gate checks, and keep separate records for actual practice.

Failure log | Authored calculations, not your errors

Original synthetic D84 at https://top1os.dev/. No new empirical reading, real data, learner response, delayed retest, independent review or app parity claimed.

Authored test / context	Observed native outcome
Baseline / rework1	PASS: original/revised/increment bridges, every cash checkpoint, separate quality, climate 300/-100 and ownership 10%/6%/MOIC 3/target equity 133.333333 match exact-rational arithmetic.
Earlier rework payment	PASS: same rework 1 moved 60->30, revised checkpoint 5/0/-1/2; minimum-1/end 2 unchanged here. No obligation shifted in real life. Restored 60.
Opening cash transfer	PASS: opening 10 gives revised minimum 2/end 5, original minimum 3/end 6. Revised operating increment 1 and quality 88% still fail. No financing created. Restored 7.
Zero / increased rework	PASS: zero/2/.5 extra rework recalculate both bridges and dated cash; not added twice. Original 1/day 60 restored.
Zero quality denominator	PASS: zero eligible/ontime counts leave quality undefined and all-pass suppressed, not 100%. Restored 22/25.
Climate baseline / zero units	PASS: baseline .50 yields-100 planned tCO2e/year, not clamped; zero units gives 0. Original .70/2000 restored. Not inventory, credits, revenue or measured emissions.
Deal retention / zero investment	PASS: retention .50 gives 5% exit/cash 5/MOIC 2.5/target equity 160. Zero retention leaves target equity undefined; zero cheque leaves MOIC/target undefined. Original restored. Follow-on intentionally not invented.
Invalid inputs / unreconciled	PASS:12 invalid financial/day/count/climate/deal inputs and 3 invalid events suppress affected results. Unreconciled ledger blocks funding gates; independent climate/deal remain separate. Restored.
Broken reference / restored	PASS: broken company-cash/exit-ownership references propagate to dependent conclusions; original baseline fully restored. Attempts sheet remains blank, no fabricated actual errors/delay/learner mastery.

This test log is not learner evidence. Attempts remains blank. Original case/rubric retained; existing IES, GHG Protocol and financial/board framing reused without a new source-depth claim. No overall 10/10, actual financing/disclosure or approval inferred.
