D 151 | Diligence without invented findings

PRIVATE FICTIONAL offline practice. INR per month / accounts / selected respondents. No actual founder, customer, reference call, quote, consent, background check, outreach, private disclosure, account or spend.

Original account case	100 accounts =40 paying+60 partner-sourced free trials. Paying does not establish organic acquisition; accounts do not establish distinct companies. 40 independent monthly subscriptions*5,000=200,000 MRR only under stipulated comparable recurring terms and no adjustments.
Separate concentration case	Largest customer MRR 80,000 / separately stipulated total MRR 200,000=40%. This is NOT the same uniform 40*5,000 ledger: a single 5,000 subscription cannot simultaneously be an 80,000 customer. The original concentration toy uses a different stipulated revenue mix; no reconciliation invented.
Original selected sample	Three of five selected respondents very disappointed=60% of that sample. This is not population product-market fit, retained use, renewal or willingness to pay. Define eligibility, recruitment, question wording, date/window and nonresponse before interpretation.
Separate nonresponse case	Eligible 20, invited 10, responded 5, very disappointed 3. Invitation coverage 50%, completion among invited 50%, answer share 60%. No respondent or nonrespondent answer is fabricated. Extreme bounds are arithmetic possibilities, not confidence intervals or estimates.
Design before contact	Twelve open single-focus prompts plus optional follow-ups are drafts, not a universal best question set. Permission to contact, record, retain and share are separate, scope-limited decisions. Actual notes, consent, accepted owner and resolution stay blank.
Evidence not verdict	Keep conflicting accounts separately with firsthand scope, dates, context, counterevidence and open checks. Off-list does not imply unbiased or authorized. Pause, dates-only refusal, style, turnover or cultural stereotype does not prove dishonesty or lack of coachability.

Inputs | Independent fictional cases

Shaded values editable. Counts whole nonnegative; INR/month nonnegative. Independent concentration total/largest are NOT the uniform subscription case. Survey nested counts stipulated, not observed.

Paying accounts / independent monthly subscriptions	40.00
Partner-sourced free-trial accounts	60.00
Uniform recurring INR per subscription per month	5000.00

Separate concentration: total recurring INR/month	200000.00
Separate concentration: largest customer INR/month	80000.00

Survey: eligible units	20.00
Survey: invited eligible units	10.00
Survey: respondents answering the item	5.00
Survey: very disappointed respondents	3.00

Accounts / recurring numeric gate	1.000000
Separate concentration numeric gate	1.000000
Nested survey count gate	1.000000

Zero denominators undefined, not observed zero. Uniform subscriptions independent with no discount/refund/tax/FX/usage/annual-plan/cash timing adjustments. MRR not cash collected or accounting revenue. Static baseline labels/prose must be revised before exporting edited cases. No actual billing system used.

Accounts and MRR | Do not join incompatible toys

Conditional fictional arithmetic. Independent families; undefined denominators remain #N/A. No real diligence finding, sampling guarantee or business verdict.

All accounts	100.000000
Paying fraction of accounts	0.400000
Free-trial fraction of accounts	0.600000
Uniform subscription MRR, INR/month	200000.000000
Annualized run rate, NOT forecast revenue	2400000.000000
Account partition identity; must be zero	0.000000

Separate largest-customer MRR fraction	0.400000
Separate other-customer MRR, INR/month	120000.000000
Separate other-customer MRR fraction	0.600000

Baseline 100/.4/.6/200000/2400000/0; separate concentration.4/120000/.6. Annualized run rate assumes a constant monthly snapshot, not booked ARR, cash or next-year revenue. No same-customer ledger links two cases; original uniform 40*5000 cannot have one 80000 subscription. Organic source, distinct companies, contracts and recurring adjustments remain unknown.

Survey | Nonresponse is unknown, not a no

Conditional fictional arithmetic. Independent families; undefined denominators remain #N/A. No real diligence finding, sampling guarantee or business verdict.

Invited fraction of eligible	0.500000
Completion fraction among invited	0.500000
Respondents fraction of eligible	0.250000
Very disappointed fraction of respondents	0.600000
Invited nonrespondents	5.000000
Uninvited eligible units	10.000000
Other observed respondent answers	2.000000
Invited extreme lower fraction	0.300000
Invited extreme upper fraction	0.800000
Eligible extreme lower fraction	0.150000
Eligible extreme upper fraction	0.900000

Baseline.5/.5/.25/.6/5/10/2/.3/.8/.15/.9. Bounds hold observed answers fixed and assign every unknown unit no vs yes; not estimated answers, confidence intervals, population PMF, retention or renewal. Completion fraction here is a simple classroom ratio, not a formal standardized survey response-rate calculation. Low completion alone neither proves nor rules out bias; high completion alone does not establish representativeness.

Question drafts | Context and observed work

Draft only. Optional follow-ups asked separately: can you give an example; what did you observe; what remains outside your knowledge? No completed interview or universal predictive score.

1. Relationship	In what role did you work with the person or product?
2. Observation window	During what dates did you directly observe the work?
3. Firsthand work	What is one piece of work you directly observed?
4. Decision under pressure	What decision did you directly observe under a constraint?
5. Response to feedback	What happened after one specific piece of feedback?
6. Failure risk	What is one risk you could assess from firsthand experience?

Question drafts | Customer behavior and counterevidence

Draft only. Optional follow-ups asked separately: can you give an example; what did you observe; what remains outside your knowledge? No completed interview or universal predictive score.

7. Purchase process	How was the purchase decision made in your setting?
8. Actual use	What did you use the product for in a recent period?
9. Alternative	What alternative did you consider for that task?
10. Switching friction	What would make a switch difficult in your setting?
11. Renewal constraint	What could affect the next renewal decision?
12. Counterevidence	What evidence would change your current account?

Permission design | A draft is not consent

No message sent, no person contacted, no actual recording, reference check, background check or private disclosure.

Before any contact	Resolve actual person/channel, purpose, scope and owner approval. Off-list sources need their own authorized route; being discoverable does not establish consent. Do not contact current employer or disclose fundraising/employment facts from this classroom exercise.
Separate choices	Ask whether they agree to the conversation and note-taking. Recording, retention, audience, attribution, follow-up and onward sharing each need clear scope. Anonymized notes can still identify a person through context; no promise of absolute secrecy.
Minimize information	Use firsthand job/product context relevant to the agreed question. Do not request protected personal traits, credentials, confidential former-employer files, private health data or unrelated personal history. Skip or stop when scope is unclear.
Refusal and missingness	Dates-only confirmation, declined question or no response is limited information, not a negative verdict. Record unknown/declined/not applicable distinctly. ILPA fund-manager context supports staged/redacted responses; it does not authorize startup calls.
Keep attribution	Separate quote vs paraphrase vs inference and source vs analyst view. Preserve timing, relationship, firsthand scope and contradictory evidence. Do not invent verbatim quotes or merge incompatible claims into one purported fact.
No automatic decision	Method drafts do not establish fraud detection, integrity, coachability, founder quality, investment suitability or legal compliance. Actual evidence, permission, accepted owner and investment decision remain blank.

Evidence | Method, policy context and limits

Seven URLs/five organizations, three types: practitioner opinions, institutional diligence guidance, survey methods/software metric documentation. No independent validation of founder traits or actual customer outcomes.

Founder references	https://www.1752.vc/learn/how-vcs-run-founder-reference-checks | Complete returned written page read, not image/linked sources. Backchannel weight, elite references, hesitation, cultural ratings and critic-probability example are author views/assumptions, not permission or validated predictors. No independent verification of quoted 2016 survey or linked 2026 media.
Founder framework	https://www.allied.vc/guides/how-to-assess-founders-during-due-diligence | Complete returned written page including disclaimer read, October 9,2025; not images/linked sources. Full-time requirement is firm-specific; scorecard, turnover and cultural style not guaranteed verdicts. No background check or investment performed.
Institutional context	https://ilpa.org/wp-content/uploads/2021/11/ILPA-DDQ-2.0-User-Guide.pdf | Complete returned written text read, November 9,2021 v 1.0, not pixel-level PDF/underlying DDQ. PE-manager reference point, confidential/staged/redacted responses and N/A rationale; not startup-specific contact permission or legal clearance.
Survey methods	https://www.pewresearch.org/writing-survey-questions/ | Selected opening/question-development/open-vs-closed/question-wording portions read, not whole page/images/video. https://www.pewresearch.org/short-reads/2015/07/21/the-challenges-of-polling-when-fewer-people-are-available-to-be-polled/ | Complete returned written 2015 interview read, not images/underlying studies. Historical US polling context, not current India startup benchmarks or a guarantee weighting removes bias.
MRR conventions	https://stripe.com/resources/more/what-is-monthly-recurring-revenue | Selected MRR definition/calculation portions read, not benchmarks or PMF claims validated. https://docs.stripe.com/billing/subscriptions/analytics | Selected metric-definition settings: discounts/active subscribers read, not all docs/UI. Vendor metric configuration can differ; no billing account used. Classroom assumptions explicit, not GAAP/IndAS revenue/cash/renewal proof.
Outcome limits	All inputs and scenarios fictional. No actual interviews, quotes, consent, customer findings, company ledger, representative sample, PMF, retention, legal/background verdict or investment recommendation. No full source/AV, nativeExcel/Sheets parity, independent learner/account/field/overall 10 claim.

Contradictions | Keep both accounts open

Blank actual record. No invented identities, quotes, completed calls, consent, resolution or accepted owner. Proposed prompts/roles are not actual commitments.

Claim A / source	Claim B / source	Dates / scope	Firsthand / limits	Counterevidence	Open check	Owner / authority

Unknown stays blank. A missing answer is not false, negative, zero or agreed. No actual contact, recording, private disclosure, background search, account, learner test, investment or spend. This record does not create permission or ownership.

Actual plan | No contact or acceptance

Blank actual record. No invented identities, quotes, completed calls, consent, resolution or accepted owner. Proposed prompts/roles are not actual commitments.

Role / purpose	Contact scope	Note / recording	Retention / audience	Quote permission	Evidence / gaps	Accepted owner

Unknown stays blank. A missing answer is not false, negative, zero or agreed. No actual contact, recording, private disclosure, background search, account, learner test, investment or spend. This record does not create permission or ownership.

Failure log | Authored arithmetic, not field results

No observed learner, reference or customer study. Tests validate only authored fictional formulas and blank-template preservation.

1	PASS: 23 baseline formulas independently recomputed.
2	PASS: 14 changed input sets plus restored baseline.
3	PASS: 20 invalid inputs/460 isolation checks.
4	PASS: 6 broken references/6 checks.
5	PASS: 8 boundaries;zero/nested/denominator constraints.
6	PASS: uniform MRR and concentration independent.
7	PASS: extreme survey bounds not estimates or CIs.
8	PASS: actual notes/contradictions/consent rows blank.
