Growth passes operating. It fails cash and quality.

Do not adopt the full growth plan on the supplied gates.

Continue existing, redesign/stage or defer remain alternatives.

0.6 lakh

Minimum company cash versus proposed floor 2

Incremental operating 2.8 meets 2.5.

Ending cash 2.4 hides the earlier floor breach.

On-time 27/30=90% misses 95%. All figures and roles invented.

One baseline. Growth numbers are totals.

90-day lakh INR	Existing	Growth TOTAL	Change
Revenue	30	42	12
Variable costs	18	25.2	7.2
Avoidable fixed	9	11	2
Collections	27	33.6	6.6
New capex	0	3	3
Operating remainder	3	5.8	2.8

Same horizon and accounting basis. No opening working capital, taxes or financing in this case.

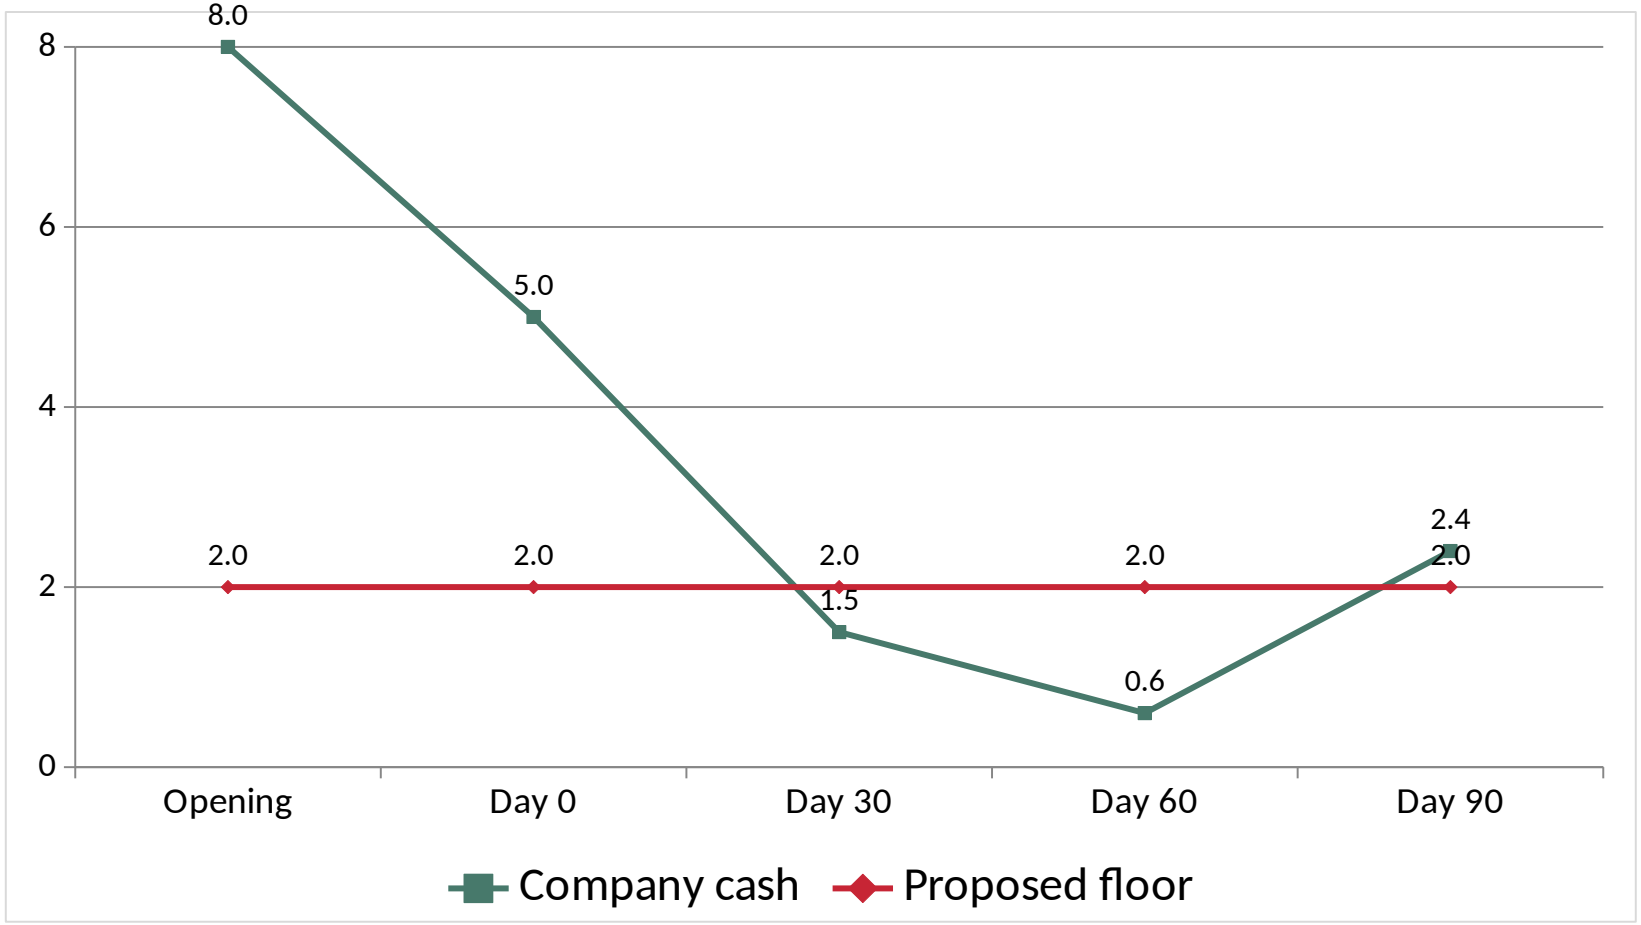

Incremental operating is not incremental cash

Bridge / lakh INR	Existing	Growth TOTAL	Increment
Operating remainder	3	5.8	2.8
Receivables	3	8.4	5.4
New capex	0	3	3
Project cash movement	0	-5.6	-5.6

2.8 operating -5.4 receivables -3 capex = -5.6 cash.

Positive operating uplift does not finance earlier payments.

Ending cash clears the floor. Earlier cash does not.

Minimum 0.6

Draw 7.4

End move -5.6

Only simultaneous net events at stated dates.

Intraperiod obligations and payment ordering unknown.

Quality has a denominator, not a growth narrative

Invented set	On-time / eligible	Observed fraction	Against 95%
Existing	19/20	95%	Meets only this sample screen
Growth	27/30	90%	Fails proposed target
No eligible deliveries	0/0	Undefined	Insufficient evidence

Small invented sets do not prove population quality, causality or future reliability.

A cash improvement cannot waive quality or participant/data permissions.

Downside is weaker. Threshold sales are not a plan.

Lakh INR	Growth base	Downside	Meaning
Operating increment	2.8	0.4	Downside misses target 2.5
Receivables	8.4	10.8	Collections 25.2 vs revenue 36
Project cash movement	-5.6	-10.4	Not net income
Ending company cash	2.4	-2.4	Gap, not approved borrowing

At 60% variable cost and fixed 11:

Revenue 27.5 = operating 0; 35 = existing operating 3; 41.25 = incremental target 2.5.

Preserve the objection. Revise the decision.

Conditional recommendation

Do not adopt the full growth plan.

Keep existing as counterfactual; redesign or defer until a complete funded, quality-tested case and actual authority exist.

Strongest authored objection

Growth earns 2.8 more operating and ends with 2.4 cash. Why wait?

Because it crosses floor 2 earlier and quality misses 95%.

Reversal evidence: dated collections/payment support, capacity/cost/quality proof, a coherent staged model and verified real rights. A prettier deck is not that evidence.

A review register is not an approval or a timer

Fictional owner	Day 0	Day 30 / dependency	Day 60 /90 stop or review
Evidence role	Freeze claims/inputs	Reconcile demand/collections sources	Retain defer if unsupported
Cash role	Log floor/obligations	Test full dates; depends on receipts	Stop unfunded floor breach
Quality role	Define eligible denominator	Check costs/capacity/quality	No pass if quality unsupported
Rights/sponsor role	Record absent real authority	Verify scope before real action	No spending/sharing absent approval

Solo rehearsal: choose a limit (e.g. 6 min), start an actual timer, then log elapsed and challenge.

No timer, spoken defence, learner response, independent panel or recording review performed here.
