D73-D74 | Evidence is not enthusiasm

All accounts, observations, artifacts and payment records are SYNTHETIC. Private classroom use; no actual fieldwork, consent, outreach or paid pilot.

Keep the raw log	Roster keeps all 40 fictional accounts, including uninvited and nonresponding accounts. Ledger keeps the 13 completed accounts, including A07/A08/B05 skeptics. Eligibility changes filter analysis, never erase the original log.
Named denominators	Funnel derives eligible, invited, completed and code counts. It labels numerator and denominator separately. A completed negative observation differs from an invited nonresponse. Undefined zero-denominator rates are not 0%.
Different evidence, different claim	Interest, past paid workaround, authority plus stated budget and completed paid test are separate binary codes. No single demand score. Synthetic evidence cannot establish market demand, causal lift, profitable scale or representativeness.
Inputs and controls	Yellow cells may be edited. Fixed roster IDs/segments define this template; validations catch malformed flags, duplicates, missing ledger rows/artifacts and impossible completion stages. Valid=1 checks structure, not truth or consent.
Changed-context retest	Set A01 and B01 eligibility to 0 without deleting their rows. Recompute every denominator and code count. Paid-test economics then models only the remaining eligible A test. Restore both flags to 1.
Economics is not cash	Two A tests at INR 3000, variable 1800 each, setup 1000 give remainder 1400. Rework 2000 outside variable cost makes -600. Collections, overheads, tax, acquisition, refunds and repeat demand are not supplied.
Authority remains separate	No real records, quotes, names, recordings, invoices or signatures. Proposed next-test owners/gates are fictional. A real paid pilot, data use or outreach requires separate permission and agreed cost/participant terms.

Roster | Preserve every account

Case-v1. Synthetic convenience roster, not a representative sample. Flags: 1 yes, 0 no. Window W1 is invented; no actual invitation/interview occurred.

Account	Segment	Eligible	Invited	Completed	Raw status	Row valid=1
A01	A	1	1	1	Completed	1.00
A02	A	1	1	1	Completed	1.00
A03	A	1	1	1	Completed	1.00
A04	A	1	1	1	Completed	1.00
A05	A	1	1	1	Completed	1.00
A06	A	1	1	1	Completed	1.00
A07	A	1	1	1	Completed	1.00
A08	A	1	1	1	Completed	1.00
A09	A	1	1	0	Invited nonresponse	1.00
A10	A	1	1	0	Invited nonresponse	1.00
A11	A	1	1	0	Invited nonresponse	1.00
A12	A	1	1	0	Invited nonresponse	1.00
A13	A	1	0	0	Not invited	1.00
A14	A	1	0	0	Not invited	1.00
A15	A	1	0	0	Not invited	1.00
A16	A	1	0	0	Not invited	1.00
A17	A	1	0	0	Not invited	1.00
A18	A	1	0	0	Not invited	1.00
A19	A	1	0	0	Not invited	1.00
A20	A	1	0	0	Not invited	1.00

Roster | Preserve every account

Case-v1. Synthetic convenience roster, not a representative sample. Flags: 1 yes, 0 no. Window W1 is invented; no actual invitation/interview occurred.

Account	Segment	Eligible	Invited	Completed	Raw status	Row valid=1
B01	B	1	1	1	Completed	1.00
B02	B	1	1	1	Completed	1.00
B03	B	1	1	1	Completed	1.00
B04	B	1	1	1	Completed	1.00
B05	B	1	1	1	Completed	1.00
B06	B	1	1	0	Invited nonresponse	1.00
B07	B	1	1	0	Invited nonresponse	1.00
B08	B	1	1	0	Invited nonresponse	1.00
B09	B	1	1	0	Invited nonresponse	1.00
B10	B	1	1	0	Invited nonresponse	1.00
B11	B	1	0	0	Not invited	1.00
B12	B	1	0	0	Not invited	1.00
B13	B	1	0	0	Not invited	1.00
B14	B	1	0	0	Not invited	1.00
B15	B	1	0	0	Not invited	1.00
B16	B	1	0	0	Not invited	1.00
B17	B	1	0	0	Not invited	1.00
B18	B	1	0	0	Not invited	1.00
B19	B	1	0	0	Not invited	1.00
B20	B	1	0	0	Not invited	1.00

Ledger | Thirteen original completions

Case-v1 codes, not real observations. Each SYN-* artifact ID is invented, not an existing invoice, quotation or consent record. Skeptics stay visible.

Account	Segment	Interest	Paid workaround	Buyer + budget	Paid test	Synthetic artifact	Eligible	Row valid=1
A01	A	1	1	1	1	SYN-A01-codes	1.00	1.00
A02	A	1	1	1	1	SYN-A02-codes	1.00	1.00
A03	A	1	1	1	0	SYN-A03-codes	1.00	1.00
A04	A	1	1	0	0	SYN-A04-codes	1.00	1.00
A05	A	1	1	0	0	SYN-A05-codes	1.00	1.00
A06	A	1	0	0	0	SYN-A06-codes	1.00	1.00
A07	A	0	0	0	0	SYN-A07-codes	1.00	1.00
A08	A	0	0	0	0	SYN-A08-codes	1.00	1.00
B01	B	1	1	1	0	SYN-B01-codes	1.00	1.00
B02	B	1	0	0	0	SYN-B02-codes	1.00	1.00
B03	B	1	0	0	0	SYN-B03-codes	1.00	1.00
B04	B	1	0	0	0	SYN-B04-codes	1.00	1.00
B05	B	0	0	0	0	SYN-B05-codes	1.00	1.00

A07/A08/B05 are completed skeptical or non-enthusiastic accounts. Codes are not quotations and do not specify actual reasons. Do not invent missing frequency, cost, budget amount or independently verified records. Permission for real use remains absent.

Funnel | Count the stage you mean

Rates are within this synthetic convenience roster only. No population estimate, confidence interval, causal inference or launch ranking follows.

Measure / same W1 window	A	B	Denominator / meaning
Whole model valid? (1=yes)	1.00		
Eligible accounts	20.00	20.00	Eligible filter, not deletion of raw rows
Eligible invited	12.00	10.00	Eligible AND invited
Eligible completions	8.00	5.00	Eligible AND completed
Invited nonresponses	4.00	5.00	Invited minus completed, not completed negatives
Completed interest	6.00	4.00	Eligible completed interest code
Completed paid workaround	5.00	1.00	Eligible completed workaround code
Completed buyer + budget	3.00	1.00	Eligible completed authority + budget code
Completed paid tests	2.00	0.00	Eligible completed paid-test code
Invitation-to-completion	66.67%	50.00%	Completed / invited
Interest / completions	75.00%	80.00%	Interest / completed
Workaround / completions	62.50%	20.00%	Workaround / completed
Buyer-budget / completions	37.50%	20.00%	Buyer + budget / completed
Paid tests / completions	25.00%	0.00%	Tests / completed
Paid tests / invitations	16.67%	0.00%	Tests / invited

Baseline: A20/12/8 and B20/10/5 eligible/invited/completed. Interest75% vs 80% is not market size or purchase intent. A 4/B 5 nonresponses remain separate from A 2/B 1 completed skeptics. Structural validity is not evidence authenticity.

Economics | Two tests are not a market

Money is INR, not lakh. Only eligible completed A paid tests feed this sensitivity. It is not a real cash or demand forecast.

Price per delivered A test	3000
Variable cost per test	1800
Avoidable one-time setup	1000
Extra rework outside variable cost	2000

Economics inputs valid? (1=yes)	1.00
Eligible completed A tests	2.00
Revenue	6000.00
Total stated variable cost	3600.00
Contribution before setup	2400.00
Remainder after setup	1400.00
Remainder with extra rework	-600.00
Rework cost for zero remainder	1400.00

With two tests: revenue 6000, variable 3600, contribution 2400, remainder 1400; rework 2000 gives -600. Rework break-even 1400 is an algebraic threshold, not an authorized budget. A negative remainder means no nonnegative additional rework can be absorbed. A01 ineligible leaves one test: remainder 200, rework remainder -1800.

Collections, tax, overhead, customer acquisition, refunds, repeat demand and B pricing are unknown. No actual payment or collection requested. A higher B interest rate does not override missing payment/cost evidence or grant pilot permission.

Evidence guide | Trace and challenge

Classroom codebook and fictional review gates. No actual participant evidence or legal clearance. Existing D73/D74 readings are framing guidance.

Interest	A01-A06/B01-B04. General interest only. Not purchase intent or a paying customer.
Past workaround	A01-A05/B01. Coded past-month paid workaround. Cost/frequency/artifacts are not supplied as real corroboration.
Authority + budget	A01-A03/B01. Coded authority and stated budget, not payment or independently verified purchasing power.
Paid test	A01-A02 only. Synthetic completion/payment and unit cost case, not a real transaction or repeat demand.
Neutral prompts	For a later separately authorized study: last occurrence, context, workaround, impact/cost, buying process and failure. Do not pitch first or lead the desired answer.
Contradiction	Keep A07/A08/B05 and all nonresponse. Higher B interest 80% vs A 75% can coexist with fewer workaround/budget/payment codes. No launch choice follows.
Fictional gates	Day 0 evidence owner checks IDs/stages; day 30 cost owner checks setup/rework; day 60 permission/privacy owner holds any real outreach or paid pilot; day 90 sponsor-role reviews conditional next test or defer.
Permission / retention	No real outreach, recording, data, invoice, quotation or consent. SYN-* labels are invented artifacts, not anonymized people. Real scope, participant/data rights, secure retention and cost authority must be verified separately.

Provenance: Case-v1, D73-D74 at https://top1os.dev/ ; invented W1 window and roster assignments for invited/nonresponding IDs preserve original counts. No new empirical source reading is claimed. Existing GOV.UK guidance is not proof of Indian legal compliance.

Failure log | Authored native tests

Only fill observed outcomes after running tests. Not learner attempts, independent review, measured skill transfer or Excel/Sheets parity.

Test	Expected	Observed authored outcome
Baseline	Stages, code counts/rates and economics match exact rational model.	PASS: all raw-row checks, counts, stage rates and economics match independent exact-rational model.
Two ineligible completions	A01/B01 retained; recompute eligible funnels and economics.	PASS: A01/B01 retained but excluded from eligible counts; A remainder 200 and rework -1800. Restored.
Duplicate ledger ID	Whole model invalid, no fake numeric rate.	PASS: duplicate ID invalidates the model and suppresses rates/economics; restored.
Missing artifact	Whole model invalid, provenance cannot silently disappear.	PASS: missing synthetic artifact label invalidates model; restored.
Malformed binary codes	Negative/text/blank flags invalidate; no fake zero.	PASS: negative, 2, text and blank binary codes all rejected; restored.
Completion without invitation	Roster invalid, no fake funnel pass.	PASS: completed without invitation rejected; restored.
Zero eligible B invitations	No deletion; zero-denominator rates unavailable, not 0%.	PASS: B zero eligible invitations/completions keeps original raw rows; all six rates undefined, not zero. Restored.
Broken count reference	Error propagates; no fake numeric rate.	PASS: broken count reference propagates an error to stage rates, not false numeric pass; restored.
Economics bad input	Negative/text/blank price rejected.	PASS: negative,text and blank price reject economics; restored.
Restored baseline	All baseline checks match after restoration.	PASS: every baseline check restored; extra nonresponse completion was also rejected without ledger evidence.

Keep your own attempt, observed error, cause, corrected cell/formula and changed-context retest. Do not copy the authored PASS log as evidence of independent mastery or sponsor approval.
