D72 | Same totals, different funding

Top 1% Learning OS | 13 November 2026 | All money in lakh INR, one synthetic 12-week horizon; week 0 is the opening instant, not an extra operating week.

Start from the blank case	Build your own model first, then compare. Yellow cells are invented editable inputs; purple cells calculate. No real SME, sponsor, interview, delivery observation or approval is claimed.
Read the bridges	Inputs and Comparison retain A/B/defer/downside totals from D72. Operating remainder is after stated variable and avoidable fixed costs, before capex. Revenue minus collections becomes receivables.
Timing is new and fictional	Three A-only schedules have exactly the same totals. Staged/early/late are alternative invented timing assumptions, not dates supplied by the original case or a claim that each is operationally feasible.
Cash convention matters	Opening incremental cash is zero. Negative cumulative cash indicates external funding needed, not company insolvency. Peak draw uses weekly end balances plus week 0; it can miss intraperiod troughs unless event order is supplied.
Proposed gates are not approval	A base operating remainder passes 2; B fails it. Cash cap is 3 peak draw. No delivery-quality evidence exists, so even a timing scenario that passes cash remains unapproved. No actual release of capital.
Make controlled changes	Move receipts while keeping their total fixed. Change a scheduled amount without changing the case total: audit must fail. Try a negative/text/blank receipt or a broken formula, then restore. Native test log records only authored-file tests.
Scope and omissions	No cannibalization/capacity conflict, tax, financing, bad debt, unpaid payables, depreciation or other cash effects. Dates, units, losses and cash order need real evidence before real use. No macros, external links, accounts, recording, data export or learner tracking.

Inputs | One horizon, four alternatives

Case-v1 fictional totals. A/B/defer are mutually exclusive; A downside is a sensitivity, not a fourth simultaneous project. No probabilities assigned.

Input / lakh INR	A base	B base	Defer	A downside
Recognized revenue	9.000	12.000	0.000	6.000
Variable costs paid	5.400	8.400	0.000	3.600
Avoidable fixed paid	1.200	2.400	0.000	1.200
Collections	6.300	8.400	0.000	4.200
Capex paid	1.000	2.000	0.000	1.000

Operating target	2.000
Peak draw cap	3.000
On-time delivery target	0.950

Quality is unmeasured. Input checks require five numeric nonnegative amounts per case, collections no greater than recognized revenue, and numeric/nonnegative proposed financial gates. They do not validate demand, cost completeness or legality.

Comparison | Profit is not funding

Two cash paths should reconcile exactly under the stated no-other-effects model. Timing-dependent peak is not inferred from these totals.

Output / lakh INR	A base	B base	Defer	A downside
Inputs valid? (1=yes)	1.000	1.000	1.000	1.000
Operating remainder	2.400	1.200	0.000	1.200
End receivables	2.700	3.600	0.000	1.800
Cash via collections	-1.300	-4.400	0.000	-1.600
Cash via operating bridge	-1.300	-4.400	0.000	-1.600
Bridge residual (zero)	0.000	0.000	0.000	0.000
Endpoint draw lower bound	1.300	4.400	0.000	1.600
Operating target passes? (1=yes)	1.000	0.000	0.000	0.000
Endpoint already exceeds cap? (1=yes)	0.000	1.000	0.000	0.000

A constant-margin breakeven revenue	3.000
A revenue for operating target	8.000

A endpoint draw 1.3 is only a lower bound on peak draw. B endpoint draw 4.4 already breaches 3. Break-even 3 and target revenue 8 assume the same 40% margin and fixed 1.2; they do not establish demand, quality or cash timing.

Timing | Staged receipts and operating payments

New A-only fictional timing assumption. Week-end snapshots; no intraperiod order supplied. Yellow cells may be edited, but all four flow totals must still equal A base.

Week end	Receipts	Variable paid	Fixed paid	Capex paid	Net flow	Cumulative cash	Draw
0.000	0.000	0.000	0.000	1.000	-1.000	-1.000	1.000
1.000	0.525	0.450	0.100	0.000	-0.025	-1.025	1.025
2.000	0.525	0.450	0.100	0.000	-0.025	-1.050	1.050
3.000	0.525	0.450	0.100	0.000	-0.025	-1.075	1.075
4.000	0.525	0.450	0.100	0.000	-0.025	-1.100	1.100
5.000	0.525	0.450	0.100	0.000	-0.025	-1.125	1.125
6.000	0.525	0.450	0.100	0.000	-0.025	-1.150	1.150
7.000	0.525	0.450	0.100	0.000	-0.025	-1.175	1.175
8.000	0.525	0.450	0.100	0.000	-0.025	-1.200	1.200
9.000	0.525	0.450	0.100	0.000	-0.025	-1.225	1.225
10.000	0.525	0.450	0.100	0.000	-0.025	-1.250	1.250
11.000	0.525	0.450	0.100	0.000	-0.025	-1.275	1.275
12.000	0.525	0.450	0.100	0.000	-0.025	-1.300	1.300
Totals	6.300	5.400	1.200	1.000			
Valid?	1.000	**Peak draw**	1.300	**End cash**	-1.300	**Cap passes?**	1.000

A passing weekly-end cap is conditional on this invented schedule and sampling convention. Pay-before-receipt within a week can require more funding. Quality evidence and actual permission are still missing; no unconditional project approval.

Timing | Early costs, milestone receipts

New A-only fictional timing assumption. Week-end snapshots; no intraperiod order supplied. Yellow cells may be edited, but all four flow totals must still equal A base.

Week end	Receipts	Variable paid	Fixed paid	Capex paid	Net flow	Cumulative cash	Draw
0.000	0.000	2.700	0.600	1.000	-4.300	-4.300	4.300
1.000	0.000	0.000	0.000	0.000	0.000	-4.300	4.300
2.000	0.000	0.000	0.000	0.000	0.000	-4.300	4.300
3.000	0.000	0.000	0.000	0.000	0.000	-4.300	4.300
4.000	2.100	0.000	0.000	0.000	2.100	-2.200	2.200
5.000	0.000	0.000	0.000	0.000	0.000	-2.200	2.200
6.000	0.000	2.700	0.600	0.000	-3.300	-5.500	5.500
7.000	0.000	0.000	0.000	0.000	0.000	-5.500	5.500
8.000	2.100	0.000	0.000	0.000	2.100	-3.400	3.400
9.000	0.000	0.000	0.000	0.000	0.000	-3.400	3.400
10.000	0.000	0.000	0.000	0.000	0.000	-3.400	3.400
11.000	0.000	0.000	0.000	0.000	0.000	-3.400	3.400
12.000	2.100	0.000	0.000	0.000	2.100	-1.300	1.300
Totals	6.300	5.400	1.200	1.000			
Valid?	1.000	**Peak draw**	5.500	**End cash**	-1.300	**Cap passes?**	0.000

A passing weekly-end cap is conditional on this invented schedule and sampling convention. Pay-before-receipt within a week can require more funding. Quality evidence and actual permission are still missing; no unconditional project approval.

Timing | Same staged payments, all receipts in week 12

New A-only fictional timing assumption. Week-end snapshots; no intraperiod order supplied. Yellow cells may be edited, but all four flow totals must still equal A base.

Week end	Receipts	Variable paid	Fixed paid	Capex paid	Net flow	Cumulative cash	Draw
0.000	0.000	0.000	0.000	1.000	-1.000	-1.000	1.000
1.000	0.000	0.450	0.100	0.000	-0.550	-1.550	1.550
2.000	0.000	0.450	0.100	0.000	-0.550	-2.100	2.100
3.000	0.000	0.450	0.100	0.000	-0.550	-2.650	2.650
4.000	0.000	0.450	0.100	0.000	-0.550	-3.200	3.200
5.000	0.000	0.450	0.100	0.000	-0.550	-3.750	3.750
6.000	0.000	0.450	0.100	0.000	-0.550	-4.300	4.300
7.000	0.000	0.450	0.100	0.000	-0.550	-4.850	4.850
8.000	0.000	0.450	0.100	0.000	-0.550	-5.400	5.400
9.000	0.000	0.450	0.100	0.000	-0.550	-5.950	5.950
10.000	0.000	0.450	0.100	0.000	-0.550	-6.500	6.500
11.000	0.000	0.450	0.100	0.000	-0.550	-7.050	7.050
12.000	6.300	0.450	0.100	0.000	5.750	-1.300	1.300
Totals	6.300	5.400	1.200	1.000			
Valid?	1.000	**Peak draw**	7.050	**End cash**	-1.300	**Cap passes?**	0.000

A passing weekly-end cap is conditional on this invented schedule and sampling convention. Pay-before-receipt within a week can require more funding. Quality evidence and actual permission are still missing; no unconditional project approval.

Timing summary | Endpoint stays -1.3

All three schedules preserve A totals and operating remainder. Their peak funding differs because the time path changes. Validity flags must be 1 before interpreting outputs.

A-only timing case	Valid=1	Operating remainder	Endpoint cash	Peak draw	Cash cap passes=1	Quality
Staged	1.000	2.400	-1.300	1.300	1.000	UNKNOWN
Early costs	1.000	2.400	-1.300	5.500	0.000	UNKNOWN
Late receipts	1.000	2.400	-1.300	7.050	0.000	UNKNOWN

Base outcomes: staged peak 1.3; early costs peak 5.5; late receipts peak 7.05, all endpoint cash -1.3. Same horizon/flow totals do not prove same funding feasibility. Earliest week-end maximum in late receipts is week 11; within-week payment order remains unmodeled.

Conditional recommendation: B fails operating and cash totals. A can only proceed as a classroom candidate under a funded, operationally supported timing model plus quality evidence and the actual owner approval. Defer/redesign remain available. No observed delivery quality or sign-off exists.

Fictional day 0 permission/formula reviewer; day 30 weekly-cash reviewer; day 60 quality/evidence reviewer; day 90 decision reviewer. Stop for invalid data, unfunded draw, missing quality evidence or absent authority. These are simulated role checkpoints, not assigned people.

Registry | Trace assumptions, not invented evidence

Each input is synthetic Case-v1 or Timing-v1. The module is an educational case, not a real customer financial statement or approved pilot.

ID	Inputs / lineage	Unit / horizon	Status	Audience	Owner role	Missing real evidence
Case-v1	Inputs!B6:E10; A/B/defer/downside	lakh INR / 12 weeks	Synthetic totals	Private study	Case author	Demand, complete costs, receivables, capacity.
Gates-v1	Inputs!B13:B15	lakh / ratio / same period	Proposed, not approved	Private study	Fictional sponsor	Real authorized thresholds/quality definition.
Timing-v1	Staged/Early costs/Late receipts!B6:E18	lakh / week0-12	New invented timing	Private study	Case author	Invoices, payment terms, feasible delivery dates, event order.
Controls	Comparison/validity/reconciliation formulas	same case / fixed totals	Authored model logic	Private study	Formula reviewer role	Not independent audit or spreadsheet-app parity.
Research references	D72 selected GradCoach/Sequoia/GOV.UK reading	Framing / ethical practice	Published guidance	Read source terms	Source publishers	Not proof of Indian legal compliance or SME consent.

Module source: https://top1os.dev/ | D72. Existing selected research-record/privacy guidance: https://www.gov.uk/service-manual/user-research/taking-notes-and-recording-user-research-sessions . No private real data, addresses or participant identities are included.

Method: direct cash flow equals collections less paid variable/fixed/capex; indirect bridge equals operating remainder minus receivables minus capex under exact exclusions. Peak is max(0, minus weekly cumulative incremental cash). This workbook is a new authored calculation, not extracted supplier/company evidence.

Failure log | Native authored-model tests

Recorded only after the tests run. This is not a record of a learner attempt, actual independent reviewer, measured skill or application parity.

Test	Expected	Observed authored outcome
Base comparison	A2.4/-1.3; B1.2/-4.4; downside1.2/-1.6	PASS: all four bridges and thresholds match independent rational values.
Three timing cases	Same totals; peak1.3/5.5/7.05	PASS: every weekly flow/cumulative/draw matches independent calculation.
Move late receipt earlier	Preserve6.3total; peak changes, endpoint same	PASS: moving receipt to week0 keeps endpoint -1.3 and changes peak to1.3; restored.
Unreconciled schedule	Valid0, dependent outputs unavailable	PASS: changed total flags invalid and suppresses peak, restored.
Negative/text/blank receipt	Valid0, no fake numeric output	PASS: negative/text/blank values flagged, peak unavailable; restored.
Impossible case collections	Comparison invalid; timing invalid	PASS: collections above recognized revenue invalidate model; restored.
Broken cumulative formula	Summary peak error, not a fake pass	PASS: error propagates to summary peak, not a false numeric pass; restored.
Zero revenue case	Valid cash case; margin thresholds undefined	PASS: cash model can be valid with zero revenue, margin thresholds undefined; restored.
Restore baseline	Exact baseline values restored	PASS: all comparison/timing values restored and rechecked.

Keep your own original attempt, observed mistake, cause, corrected formula/input, affected output and changed-context retest. If no error occurred, say so. Do not copy an authored PASS log as evidence of independent skill or approval.
