D 161 | Downside recap and negotiated alternatives

FICTIONAL offline exit lab. Crore distributable equity cash, not enterprise value. No actual sale, employee entitlement, board consent or legal/tax opinion.

Independent recap	Common .35 / Seed .25 / A .20 / B .20, independently stipulated, not derived from D 157 rounds. E 240 after excluded liabilities. Explicit B 100 > A 30 > Seed 10 preferences; Seed/B non-participating, A participating with total receipts cap 60. Optional conversion removes its preference and cap.
Joint elections	All eight block conversion vectors shown. Pay nonconverted preferences in stated order limited by available cash. Common plus converted classes and nonconverted participating A share residual. On A cap binding remove A and renormalize leftover cash over other eligible holders. One capped class only.
Base 240	Seed converts, A participates, B preferred: common 48.125 / Seed 34.375 / A 57.5 / B 100. Residual 110 over .35+.25+.20=.80. A unilateral conversion gives 35, below 57.5. B cash 100/240=41.666667%, not its 20% ownership.
Separate A change	Set A participation 0, B forced 0, then re-solve all vectors: common 61.25 / Seed 43.75 / A 35 / B 100, common gain 13.125. A converts. Do not leave A preferred by independent preference-only shortcut.
Separate B change	Set A participation 1, B forced 1: common 78.75 / Seed 56.25 / A 60 / B 45. Common gain 30.625. Forced conversion changes feasible choices, not B voluntary preference. A reaches 60 cap. Combined changes must be re-solved, not added.
Employee rights	Employee 10 percentage points within 35 common gives conditional synthetic 13.75 at base, not confirmed proceeds. Missing approvals do not automatically grant shares or void all promises. Rights/remedy, actual holders, exercise, buyer treatment, approvals and legal/tax review remain unknown.

Inputs | Independently stipulated capitalization

Shaded fictional inputs; fractions and crore. No round-history reconstruction. Whole actual share counts, grants and votes are not supplied.

Distributable equity cash crore	240.00
Common fraction (includes synthetic employee sub-bucket)	0.35
Seed as-converted fraction	0.25
A as-converted fraction	0.20
B as-converted fraction	0.20
Seed preference claim crore	10.00
A preference claim crore	30.00
B preference claim crore	100.00
A total receipt cap crore (not multiple)	60.00
A participation flag (0=no,1=yes)	1.00
Force B conversion counterfactual (0=no,1=yes)	0.00
Numeric/domain gate (1=yes)	1.000000

Weights sum 1 within 1 e-12 numeric tolerance; each holder weight and claim strictly positive. Exit 0 allowed; cap at least A claim. A participation 0 makes cap irrelevant. Forced B flag changes feasible elections, not legal ability to remove a preference. No actual rights approval or liability evidence.

Ownership | No hidden recap derivation

Fractions directly supplied. Employee arithmetic is separately conditional, not a legal cap-table reconstruction.

Common fraction	0.350000
Seed fraction	0.250000
A fraction	0.200000
B fraction	0.200000
Total	1.000000

Baseline .35/.25/.20/.20, sum 1. These weights do NOT follow mechanically from D 157 round history. Common includes a synthetic .10 employee sub-bucket only for conditional comparison, not an unallocated reserve cash payee. No actual title, vesting/exercise or entitlement established.

Preferences | Each election changes claims

Eight vectors, 0 preferred/1 converted. Fixed explicit B > A > Seed ranking. Each preference is limited to remaining cash.

ID	Seed convert	A convert	B convert	B preference	A preference	Seed preference	Residual
0	0	0	0	100.000000	30.000000	10.000000	100.000000
1	1	0	0	100.000000	30.000000	0.000000	110.000000
2	0	1	0	100.000000	0.000000	10.000000	130.000000
3	1	1	0	100.000000	0.000000	0.000000	140.000000
4	0	0	1	0.000000	30.000000	10.000000	200.000000
5	1	0	1	0.000000	30.000000	0.000000	210.000000
6	0	1	1	0.000000	0.000000	10.000000	230.000000
7	1	1	1	0.000000	0.000000	0.000000	240.000000

Vector ID=Seed flag+2*A flag+4*B flag. A converted waives its cap and preference. Preferences paid once only. Partial senior payment can exhaust cash. This is a stipulated all-series block election, not individual holder voting or actual charter consent.

Residual | Cap binds total A return

Other weight includes common plus converted Seed/B. Eligible A is converted A or preferred participating A. Crore except fractions.

ID	Other weight	Aeligible weight	A residual	Other cash	Common residual	Seed residual	B residual
0	0.350000	0.200000	30.000000	70.000000	70.000000	0.000000	0.000000
1	0.600000	0.200000	27.500000	82.500000	48.125000	34.375000	0.000000
2	0.350000	0.200000	47.272727	82.727273	82.727273	0.000000	0.000000
3	0.600000	0.200000	35.000000	105.000000	61.250000	43.750000	0.000000
4	0.550000	0.200000	30.000000	170.000000	108.181818	0.000000	61.818182
5	0.800000	0.200000	30.000000	180.000000	78.750000	56.250000	45.000000
6	0.550000	0.200000	61.333333	168.666667	107.333333	0.000000	61.333333
7	0.800000	0.200000	48.000000	192.000000	84.000000	60.000000	48.000000

One capped participating series only. Its residual first gets at most min(pro-rata residual, cap minus preference already paid). Remaining cash goes to othereligible holders by renormalized weights. This formula is not a multiple cap water filling solver. Conversion removes cap; no A payout beyond cap while staying preferred.

Payouts | Reconcile every vector

Crore. All 8 vectors visible, including unstable ones. Cash conservation does not make an election individually optimal.

ID	Common	Seed	A	B	Sum	Sum-E
0	70.000000	10.000000	60.000000	100.000000	240.000000	0.000000
1	48.125000	34.375000	57.500000	100.000000	240.000000	0.000000
2	82.727273	10.000000	47.272727	100.000000	240.000000	0.000000
3	61.250000	43.750000	35.000000	100.000000	240.000000	0.000000
4	108.181818	10.000000	60.000000	61.818182	240.000000	0.000000
5	78.750000	56.250000	60.000000	45.000000	240.000000	0.000000
6	107.333333	10.000000	61.333333	61.333333	240.000000	0.000000
7	84.000000	60.000000	48.000000	48.000000	240.000000	0.000000

Every payout nonnegative and total E, not enterprise value. Gross proceeds only; no IRR/tax/debt recovery rate inferred. A choice can look better by itself but change another class best response; use next sheet, not independent standalone min/max thresholds.

Stability | One-class switches, others fixed

Gain is alternative own proceeds minus current, not another holder gain. Stable accepts ties within 0.00000001 crore. Forced-B mode excludes preferred B rows and its infeasible own switch.

ID	Seed gain	A gain	B gain	Stable1/0
0	24.375000	-12.727273	-38.181818	0.000000
1	-24.375000	-22.500000	-55.000000	1.000000
2	33.750000	12.727273	-38.666667	0.000000
3	-33.750000	22.500000	-52.000000	0.000000
4	46.250000	1.333333	38.181818	0.000000
5	-46.250000	-12.000000	55.000000	0.000000
6	50.000000	-1.333333	38.666667	0.000000
7	-50.000000	12.000000	52.000000	0.000000

Stable vector count	1.000000
Selected ID (first stable, not a uniqueness claim)	1.000000
Selected common	48.125000
Selected Seed	34.375000
Selected A	57.500000
Selected B	100.000000
Selected payout sum	240.000000

If no stable vector, selection undefined. If multiple stable vectors inspect each row; first ID is deterministic display only, not negotiation or legal priority. Ties may have same payouts without same election. Forced B flag defines a negotiated counterfactual, not voluntary acceptance. No actual conversion vote, coalition check or accepted choice.

Benchmarks | Separate and combined re-solves

Static baseline references. Recalculate changed rights and inspect every feasible stable row. First stable ID is presentation, not unique legal outcome.

Base 240	Common 48.125 / Seed 34.375 / A 57.5 / B 100. B preferred, A participating, Seed converted. All sum 240. A own-switch gain 35-57.5=-22.5; B own-switch 45-100=-55. A cap not binding because 57.5<60.
A-only change	A participation 0, forced B 0. Common 61.25 / Seed 43.75 / A 35 / B 100. Common gain 13.125 versus base. Seed/A convert, B stays preferred. A 35 beats preference 30 under resulting joint choices.
B-only change	A participation 1, forced B 1. Common 78.75 / Seed 56.25 / A 60 / B 45. A cap binding; remaining 180 shared .35/.25/.20 over.80. Common gain 30.625, not 100. Forced B is not voluntary conversion at base.
Combined change	A participation 0, forced B 1. All feasible stable payout rows give common 84 / Seed 60 / A 48 / B 48. Common gain 35.875, NOT 13.125+30.625=43.75. Changing other terms/elections changes the comparison denominator.
Low exits and ties	At base E 50 B 50, juniors 0. At E 0 every payout 0; irrelevant choices can tie. Count and first stable ID do not guarantee unique elections or legal holder acceptance. Stability ignores infeasible B reversal only in forced mode.
Employee and priorities	At base only, synthetic 10/35*48.125=13.75. Actual approval defects/rights/holder/buyer treatment unresolved. No automatically void grants or confirmed 13.75 payout. Clause ranking conditional on exits, runway and alternatives; no universal preference-removal recommendation.

Rights map | Economics does not establish authority

Private review framework. No employee notice, board action, shareholder consent, signature, litigation, tax advice or transaction execution.

Economic term	Senior B preference and A participation alter conditional common cash. Headline ownership and price do not determine cash or control. Removing preference, reducing participation and changing price interact; solve combined rights rather than adding gains.
Document evidence	Need actual charter/articles, SHA, instrument, amendments, issue/grant approvals and records. Identify liquidation-event definition, ranking, conversion/election procedure, cap scope, dividend/escrow/tax treatment, thresholds and buyer conditions. Model terms are not historical evidence.
Different approval bodies	Board majority, quorum, conflict treatment, class/series/pooled holder votes, reserved matters and mandatory approvals are distinct. No specific historic protective provision supplied. Do not infer actual consent from investor ownership, model docs or the payout table.
Employee remedies	Preserve promises, communications, approvals, plan, grant records, vesting/exercise dates, register and reliance. Identify actual holders and contractual/equitable rights with qualified reviewers. Missing approval is a gap, not universal nullity, automatic cure, backdating or employee shareholder status.
Transaction branch	Company sale, asset sale, dissolution, insolvency and employee settlement can differ. Real liabilities, preferences, carve-outs, bonus/option cancellation, withholding, rollover, escrow and contingent cash need actual documents and current jurisdiction-specific law. No automatic pro rata pool payout.
Accepted next steps	Actual company, audience, reviewer acceptance and authority stay blank. This is a fictional private issue map and authored calculator, not a deal recommendation, board contact, legal engagement, employee notice, filing, account operation or spend.

Actual evidence | No sale, vote or employee entitlement

Blank means unknown. No issuer, charter/SHA, grant, proceeds, reviewer acceptance, authority or settlement verified.

Case / version	Exit / liabilities	Rights / ranking	Grant / holder gap	Approval / body	Permission / reviewer	Source / next check

Actual Indian enforceability, insolvency, CCPS, employee rights and tax unscored. No legal opinion or confirmed employee payout. Authored tests do not establish native Excel/Sheets, learner/account/field/full source AV or overall 10. No real sale, notice, contact, account, consent, signature or spend.

Evidence | Reused sources retain original limits

Eight URLs/eight publishers; bank commentary, practitioner legal/finance explanation, product guide and educational text. Not eight independent effectiveness studies.

HSBC and EquityList	D 157 complete returned written evidence reused. HSBC 588 UK 2024 term sheets not India norms; guaranteed 1 x wording qualified. EquityList compulsory-convertible and independent-threshold generalizations not universal. No source chart pixels, underlying reports, linked tools or actual instrument.
CRV and Oakshore	D 157 complete returned written CRV and Oakshore guide/tables reused. Cap includes total return; classwide economic elections can have multiple stable outcomes. Market/Trados anecdotes not independently verified, product UI/code not operated; SAFE liquidity rights outside that model.
Humphreys 2020 and Cooley	D 157 extracted legal PDF text reused with multi-column extraction limits, not chart pixels or current UK/India tax advice. D 158 Cooley India/SE Asia 2022 written governance article reused; no actual instruments/cases or blanket SHA-only enforceability conclusion.
Holloway 2023	Complete returned current written page read again. Lists protective matters and option-pool timing, not actual company consent. Non-negotiable/always language is source judgment, not universal law. Authorized shares versus issued shares must be distinguished; no actual historical class vote established.
TEJU educational text	Complete returned cap explanation read, not diagrams, linked course or live calculator. Aggregate cap includes preference; displayed charts explicitly ignore conversion until later discussion. Single-investor formula cannot replace multi-series joint denominator/election re-solve.
Coverage limits	No current Indian statute/case validation, legal/employee reviewer, actual sale/approval/holder records, product account, source AV or chart replication. Conditional workbook is authored arithmetic, not legal clearance, independent learner/native parity/account/field or actual overall 10.
