D176 | Separate the ownership paths

PRIVATE SYNTHETIC venture overlay. Money crore INR, shares million, prices rupees/share. Common equity only. No real fund investment, issue, rights, mandate or India instrument form.

Entry arithmetic	10 million pre-round shares; 80 crore pre-money; 20 crore investment -> 80 rupees/share; 2.5 million new shares; 12.5 million post; 20% fund. Price conversion: 1 crore/1 million=10 rupees/share.
Inclusive later round	50 crore total round at 150 pre -> 120 rupees/share, 4.166667 million new shares, 16.666667 post. No follow-on leaves 15%. Fund 10 WITHIN total 50 buys .833333 million and maintains 20%; outside 40, not 50 plus 10; total fund cost 30.
Pool is separate	Only no-follow-on path then adds a 10% post-pool unallocated pool. New pool 1.851852 million -> 18.518519 million total -> fund 13.5%. No cash added. Do not silently combine the pool with inclusive-follow-on path.
Gross payoff, not fund return	At distributable common-equity 500/200 the pool/no-follow-on fund gets 67.5/27 -> 3.375 x/1.35 x on original 20. Gross 3 x needs equity 444.444444. No probabilities, net LP return, preferences, fees, tax, legal rights or guaranteed exit.
Reserve discipline	Separate 100 investable capital minus 70 deployed minus 20 existing reserves leaves 10 truly unallocated. New check 20 short 10 before its own follow-on reserve. Existing 20 reserves are not unallocated. Pass/defer/smallernegotiated check/reallocation need their own evidence and actual authority.
Do not merge paths	Outsiders 50 PLUS fund 10 creates total 60, not 50. Recompute share count/ownership rather than reuse 20%. A smaller negotiated check changes ownership and may change negotiated terms; rebuild the later cap table; never carry old exit ownership automatically. No actual choice/issue/approval recorded.

Inputs | Explicit units and exclusions

All Case-v 1 fictional assumptions. No preferences, fees, carry, tax, debt, transaction costs or option grants except the separate pool step. Yellow values editable.

Pre-round shares (million)	10.00
Entry pre-money equity (crore)	80.00
Fund entry investment (crore)	20.00
Later pre-money equity (crore)	150.00
Later TOTAL inclusive round (crore)	50.00
Fund inclusive follow-on (crore)	10.00
Separate pool fraction of POST-pool shares	0.10
Base distributable equity exit (crore)	500.00
Downside distributable equity exit (crore)	200.00
Proposed gross deal MOIC hurdle	3.00
Separate fund investable capital (crore)	100.00
Already deployed (crore)	70.00
Existing-name reserves (crore)	20.00

Cap table inputs valid? (1=yes)	1.00
Fund budget inputs valid? (1=yes)	1.00

Zero entry investment allowed, but gross MOIC/target return undefined. Zero pool valid; pool>=100% invalid. Inclusive follow-on cannot exceed total round. Budget-input validity does not make new check fit, establish a mandate or create pro-rata rights.

Cap table | No-follow-on versus inclusive follow-on

Money crore INR, shares million, price rupees/share. Later inclusive round total includes the fund cheque. Ownership is fully diluted common equity under stated exclusions.

Entry price (rupees/share)	80.00
Fund new entry shares (million)	2.50
Post-entry shares (million)	12.50
Fund entry ownership	20.00%

Later price (rupees/share)	120.00
Later TOTAL new shares (million)	4.17
Post-later-round shares (million)	16.67
No-follow-on ownership	15.00%

Fund inclusive new shares (million)	0.83
Fund shares after inclusive follow-on	3.33
Inclusive follow-on ownership	20.00%
Outside cash within inclusive round (crore)	40.00
Total fund cost with follow-on (crore)	30.00

Fund 10 is INCLUDED in total 50. No automatic follow-on allocation/right is granted by this formula. If actual allocation differs or fund does not participate, choose the corresponding path and recompute; total cost and ownership cannot be mixed.

Pool payoff | Only the no-follow-on path

Separate post-round pool, no cash. Distributable common-equity exit is not enterprise value. Conditional gross deal proceeds and MOIC are not realized distributions or net fund performance.

New pool shares (million)	1.85
Post-pool shares (million)	18.52
Fund ownership after pool	13.50%
Base exit proceeds (crore)	67.50
Base gross deal MOIC	3.38
Downside exit proceeds (crore)	27.00
Downside gross deal MOIC	1.35
Cash required for proposed gross hurdle	60.00
Equity exit required for gross hurdle	444.44

Original fund shares stay 2.5 million. Pool fraction 10% is of POST-pool total, so pool = pre-pool shares/9, not 10% of pre-pool shares. The threshold 444.444444 is algebra, not a supported exit forecast. Actual waterfall/preferences/rights/taxes need separate evidence.

Outside plus | Fifty outside plus ten fund

Explicit changed-context path, not the original inclusive 50. Existing pre-money remains 150 and share price 120 under original assumptions. No separate pool applied to this path.

Outside cash (original later total, now outside)	50.00
Fund added cash	10.00
Enlarged TOTAL round	60.00
New shares (million)	5.00
Post-enlarged shares (million)	17.50
Fund shares incl. new allocation	3.33
Fund ownership enlarged round	19.05%

Total 60 gives new 5 million/post 17.5 million and fund 3.333333 million -> 19.047619%, not 20%. No-follow-on 15% belongs to original total 50, not this enlarged round. The fund cost is 30 if follow-on 10 is permitted, but neither permission nor allocation is given here.

Reserves | Ten is unallocated, not thirty

Separate fictional fund capital 100 is INVESTABLE after excluded fees, not commitments before fees. Existing-name reserves 20 are not free capacity. All money crore INR.

Investable capital	100.00
Already deployed	70.00
Existing-name reserves	20.00
Truly unallocated	10.00

New initial cheque	20.00
New initial cheque shortfall	10.00
Capacity after new initial cheque	-10.00

Conditional proposed own follow-on	10.00
Shortfall incl. own follow-on reserve	20.00

New 20 exceeds unallocated 10 by 10 BEFORE its own follow-on. Reserving proposed 10 for that name would require 20 additional capacity total. Cannot raid existing 20 reserve silently. Pass/defer, smaller negotiated check or authorized reallocation remain separate choices.

Memo | Price, dilution and reserves all matter

Authored private conditional investment memo and numbered evidence index. No actual IC choice, company, allocation right, Indian law clearance or investment.

E01 | Entry / later case	Original D176 at https://top1os.dev/. Inputs B6:B11 -> Cap table B6:B20. Every value synthetic. 20/80 post-money 100 -> 20%; total 50 at 150 pre -> 15% no-follow-on or 20% with fund 10 inclusive. Unit-price conversion explicitly 10 rupees per crore/million shares.
E02 | Pool and exit	Inputs B12:B15 -> Pool payoff B6:B17. Only no-follow-on adds 10% post-pool; 13.5% ownership,500/200 exit gives 67.5/27 and 3.375 x/1.35 x. No enterprise-value debt bridge, actual waterfall, probability, fees/carry/tax or realized return inferred.
E03 | Capital budget	Inputs B16:B18 -> Reserves B6:B16. 100-70-20=10, new 20 short 10 before its own reserve. Governing documents, actual rights and reallocation permission unknown. Smaller check changes ownership and requires the whole cap table to be recomputed.
Conditional recommendation	Do not commit original 20 from only 10 unallocated or invent a pro-rata right. Compare pass/defer, negotiate smaller check or seek permitted reallocation under actual governing documents. These are hypothetical alternatives, not directions to invest or disclose data.
Strongest authored objection	High company quality/possible 500 exit might justify finding capacity. Response: quality and paper payoff do not create reserves, allocation or legal approval. A lower price/smaller check/new pool/changed round must move all affected ownership/cost/exit denominators together.
Fictional day0/30/60/90	Investment role checks economics; finance role reconciles available capital and reserves; legal role checks actual term documents/Companies Act/FEMA/SEBI/tax applicability. Stop on missing rights/authority/capital/evidence. Historical US SAFE or term-sheet links are not current India forms. No real owner accepted these roles.

Smaller check | Rebuild, do not copy ownership

Changed hypothetical terms: initial cheque equals truly unallocated capacity, capped at original requested cheque. Entry pre-money stays fixed; no-follow-on later round and then a separate post-pool. No allocation/benefit or approval implied.

Hypothetical initial cheque (crore)	10.00
Entry price (rupees/share)	80.00
New entry fund shares (million)	1.25
Post-entry shares (million)	11.25
Entry ownership	11.11%
Later round price (rupees/share)	133.33
Later new shares (million)	3.75
Post-later-round shares (million)	15.00
No-follow-on ownership	8.33%
Post-pool ownership	7.50%
Base gross proceeds (crore)	37.50
Base gross MOIC	3.75
Gross hurdle equity exit (crore)	400.00

Baseline cheque 10 -> entry 11.111111%, no-follow-on 8.333333%, post-pool 7.5%, gross 500 exit 37.5/3.75 x. No spare capital for its own reserve is shown. Price/terms, negotiated allocation, permission and future financing remain unknown. Static prose is Case-v 1, revise after edits.

Audit | Identities, not investment clearance

A broken cap-table reference blocks these summary outputs. Static Memo is Case-v 1 authored prose, not a live approval. Formula QA cannot verify governing terms, actual capital or legal applicability.

Cap-table identities and formulas valid? (1=yes)	1.00

No-follow-on plus separate pool ownership	13.50%
Inclusive follow-on ownership	20.00%
Initial cheque shortfall (crore)	10.00
Gross hurdle required equity exit	444.44

Any positive cheque shortfall means the proposed cheque does not fit truly unallocated capital. No automatic pro-rata or reserve-release right exists. Even a passing arithmetic flag cannot authorize investment, disclose records or settle Indian legal applicability.

Gates | A fictional plan, not a right

Proposed 90-day diligence window. Actual investment holding period and exit date are UNKNOWN; no time-based IRR or annualized return is implied by gross MOIC. No real owner accepted these gates.

Day 0 | Scope / investment role	Private fictional invest/pass memo. Fix instrument, exact cap-table version, inclusive versus outside-plus round, pool order and units. Record intended holding horizon as UNKNOWN until supported. Freeze any real investment, disclosure or issuance without actual authority.
Day 30 | Finance role	Reconcile investable capital, deployed cost, existing reserves and available capital from actual governing records if later authorized. Initial 20 exceeds truly unallocated 10; conditional smaller cheque needs negotiated terms and its own reserve. Stop on missing or double-spent capital.
Day 60 | Investment / legal roles	Reproduce price/share, every dilution path and full waterfall from applicable terms. Verify actual rights/allocation, transfer restrictions and India applicability using suitable current evidence. A historical educational link and this common-equity model cannot clear these gates.
Day 90 | Decision / reviewer	Require source-indexed economics, permitted capital and authority, material objection, changed view and actual decision record. Choose pass/defer/smaller negotiated cheque/authorized reallocation only if evidence supports it. Unknown authority or capital blocks investment; a passing audit formula cannot approve it.
Changed-context transfer	Without copying, reduce original entry cheque to 10 and rebuild post-entry/later shares and separate pool: 11.111111%, 8.333333%, 7.5%, gross 500 exit 37.5/3.75x. No spare own reserve shown. Then test outside 50 PLUS fund 10 rather than total 50. Actual response/delayed result remain blank.

Actual work | No investment or learner record

Actual responses, rights evidence, objections and delayed transfer stay blank. Suggested future closed-notes test: double pool fraction then restore; reduce entry cheque and rebuild every share denominator.

Actual date / path	Original response / formulas	Observed error / source	Correction / changed outputs	Rights / capital evidence	Strongest objection / changed view	New transfer / actual result

Actual work remains blank. Record only what occurred: dates, reasoning, error/source/correction, strongest objection and a new delayed transfer. No invented learner results, sponsor acceptance, actual budget release or signed rights.

Failure log | Authored execution only

Observed native tests are added only after execution. Not actual learner mistakes, independent human audit, Excel/Sheets parity, real authority or overall 10/10.

Controlled test	Observed authored outcome
Baseline all share/cash paths	PASS: independent share, price, inclusive/outside-plus, pool, exit, reserve and smaller-check paths.
Pool 20% sensitivity / restore	PASS: pool 20% changes only separate pool scenarios; restored.
Entry cheque 10 / restore	PASS: entry 10 recomputes all later denominators; restored.
Inclusive fund cheque 0 / restore	PASS: zero follow-on uses no-follow-on ownership; restored.
Zero cheque / undefined MOIC	PASS: zero initial cheque yields undefined MOIC/threshold, not fake zeros; restored.
Invalid cap table / budget input	PASS: eight invalid cap-table/budget cases block affected decisions.
Broken ownership reference / restore	PASS: broken no-follow-on ownership reference blocked Audit, restored.
All baseline and actual blanks restored	PASS: baseline restored; actual learner/investment records remain blank.

Only the original synthetic course exercise at https://top1os.dev/ supplies the case figures. No new empirical reading, real participants, company records, Indian legal clearance, actual commitments or source completeness claimed.
